TABLE OF CONTENTS

Chapter 1: INTRODUCTION .................................................................................1
  1.1 Core Issues or Problem Addressed in the Thesis.................................2
  1.2 Proposed Text Mining Framework..........................................................6
  1.3 Our Contribution......................................................................................7
  1.4 Thesis Organization ..............................................................................10

Chapter 2: TEXT MINING BACKGROUND AND THE USE OF GRAPH THEORY .................................................13
  2.1 Graph Based Representation of Text ......................................................14
  2.2 Document Summarization (Single and Multi-document Summarization) .................................................................17
  2.3 Automatic Evaluation of Machine Generated Summary ......................20
  2.4 Keyphrase Extraction ............................................................................21
  2.5 Document Clustering ............................................................................24
  2.6 Automatic Question Answering ...............................................................26

Chapter 3: A KNOWLEDGE INDUCED GRAPH-THEORETICAL MODEL WITH SENTENCE ABSTRACTION FOR SINGLE DOCUMENT SUMMARIZATION .................................................29
  3.1 Role of Document Summarization in Text Mining .................................29
  3.2 Problem Statements and Motivation .......................................................31
  3.3 Calculating Normalized Pointwise Mutual Information Score of Bigrams ........................................................................33
  3.4 Calculating Importance of Bigrams .........................................................36
  3.5 Identifying Topics Covered in Document and Ranking them ................38
  3.6 Calculating Weighted Minimum Vertex Cover ......................................39
  3.7 Generating Extract Summary ................................................................40
  3.8 Generating Abstract Summary ...............................................................41
  3.9 Algorithmic Steps for Generating Extract and Abstract Single document Summarization ..................................................43
