

INDEX

S.No	Title	Page No.
	List of Tables	i
	List of Figures	iv
1.0	INTRODUCTION	1
2.0	REVIEW OF LITERATURE	
2.1	Detection of pathogenic bacteria by conventional culture methods	7
2.2	PCR method for the detection of pathogenic bacteria	17
2.3	Multiplex PCR for the detection of pathogenic bacteria	25
3.0	MATERIALS AND METHODS	
3.1	Procurement of samples	27
3.2	Isolation and identification of bacterial pathogens from possibly contaminated samples by conventional microbiological methods	27
3.3	Conventional analysis of artificially contaminated food, water and pharma samples for bacterial pathogens	60
3.4	PCR analysis of artificially contaminated food, water and pharma samples for bacterial pathogens	61
3.5	PCR analysis of possibly contaminated food, water and pharma samples for bacterial pathogens	68
4.0	RESULTS	
4.1	Isolation and identification of bacterial pathogens from possibly contaminated and artificially contaminated food, water and pharma samples by conventional microbiological methods	69
4.2	Incidence of bacterial pathogens in possibly and artificially contaminated food, water and pharma samples by conventional culture methods	85

S.No	Title	Page No.
4.3	Polymerase Chain Reaction	99
4.4	Incidence of bacterial pathogens in possibly and artificially contaminated food, water and pharma samples by multiplex PCR	116
4.5	Comparison of Conventional culture Vs mPCR methods for testing the incidence of bacterial pathogens in possibly contaminated food, water and pharma samples	137
5.0	DISCUSSION	149
6.0	SUMMARY	162
7.0	BIBLIOGRAPHY	169
