

LIST OF TABLES

S.No	Title	Page No.
1.	Analysis of food/water samples for the detection and confirmation of <i>Escherichia coli</i>	73
2.	Analysis of food/pharma samples for the detection and confirmation of <i>Salmonella</i>	73
3.	Analysis of food/water samples for the detection and confirmation of <i>Staphylococcus aureus</i>	73
4.	Analysis of food samples for the detection and confirmation of <i>Shigella</i> spp.	74
5.	Analysis of food/water samples for the detection and confirmation of <i>Vibrio cholerae</i>	74
6.	Analysis of food samples for the detection and confirmation of <i>Vibrio parahaemolyticus</i>	74
7.	Analysis of food samples for the detection and confirmation of <i>Listeria monocytogenes</i>	75
8.	Analysis of food samples for the detection and confirmation of <i>Bacillus cereus</i>	75
9.	Analysis of water samples for the detection and confirmation of <i>Pseudomonas aeruginosa</i>	79
10.	Analysis of water samples for the detection and confirmation of <i>Streptococcus faecalis</i>	79
11.	Analysis of pharma samples for the detection and confirmation of <i>Escherichia coli</i>	83
12.	Analysis of pharma samples for the detection and confirmation of <i>Staphylococcus aureus</i>	83
13.	Analysis of pharma samples for the detection and confirmation of <i>Pseudomonas aeruginosa</i>	83
14.	Incidence of bacterial pathogens in the first set of possibly contaminated food samples by standard conventional methods	86
15.	Incidence of bacterial pathogens in the second set of possibly contaminated samples by standard conventional methods	87

S.No	Title	Page No.
16.	Detection of bacterial pathogens in the first set of artificially contaminated food samples by standard conventional methods	89
17.	Detection of bacterial pathogens in the second set of artificially contaminated food samples by standard conventional methods	90
18.	Incidence of bacterial pathogens in possibly contaminated water samples by standard conventional methods	92
19.	Detection of bacterial pathogens in artificially contaminated water samples by standard conventional methods	94
20.	Incidence of bacterial pathogens in possibly contaminated pharmaceutical raw materials and finished products by standard conventional methods	96
21.	Detection of bacterial pathogens in artificially contaminated pharmaceutical raw materials and finished products by standard conventional methods	98
22.	Specificity test for food-borne pathogenic strains (Multiplex PCR 1)	106
23.	Specificity test for food-borne pathogenic strains (Multiplex PCR 2)	107
24.	Specificity test for water-borne pathogenic strains (Multiplex PCR 3)	108
25.	Specificity test for pharma contaminants (Multiplex PCR 4)	109
26.	Gene bank Accession numbers	110
27.	Incidence of bacterial pathogens in the first set of possibly contaminated food samples by mPCR 1	117
28.	Incidence of bacterial pathogens in the second set of possibly contaminated food samples by mPCR 2	119
29.	Detection of bacterial pathogens in the first set of artificially contaminated food samples by mPCR 1	122
30.	Detection of bacterial pathogens in the second set of artificially contaminated food samples by mPCR 2	124
31.	Incidence of bacterial pathogens in possibly contaminated water samples by mPCR 3	127

S.No	Title	Page No.
32.	Detection of bacterial pathogens in artificially contaminated water samples by mPCR 3	130
33.	Incidence of bacterial pathogens in possibly contaminated pharmaceutical raw materials and finished products by mPCR 4	132
34.	Detection of bacterial pathogens in artificially contaminated pharma samples by mPCR 4	135
35.	Incidence of bacterial pathogens in possibly contaminated food samples by mPCR 1 Vs conventional culture method	138
36.	Incidence of bacterial pathogens in possibly contaminated food samples by mPCR 2 Vs conventional culture method	141
37.	Incidence of bacterial pathogens in possibly contaminated water samples by mPCR 3 Vs conventional culture method	144
38.	Incidence of bacterial pathogens in possibly contaminated pharma samples by mPCR 4 Vs conventional culture method	147
