# Chapter 1: Review of literature

1. **Introduction**

1.1. Origin of the research problem

1.2. Interdisciplinary relevance

1.3. Nanotechnology in medicine

1.4. Drug delivery system

1.5. Use of Nanoparticulate delivery systems in Nanomedicine

1.6. Types of Nanoparticulate delivery systems

1.7. Introduction to vesicular carrier systems

1.8. Liposomes/Escheriosomes

1.9. Fibrin beads

1.10. Biodegradable Polymeric Systems

1.11. Biodegradable Microspheres As Drug Delivery System

1.12. Opportunistic fungal infections: Candida albicans

1.13. Cryptococcus neoformans

1.14. Antifungal therapy

1.15. Amphotericin B

1.16. Herbal drugs in treatment of fungal pathogens

1.17. Macrophage as a target

1.18. Aims and objectives of the thesis

# Chapter 2: Escherisome mediated cytosolic delivery of Candida albicans cytosolic proteins induce enhanced cytotoxic T lymphocyte response and protective immunity

2. **Introduction**

2.1. Origin and need of the research

2.2. Mechanism of Escherisome entrapped antigen

2.3. Scope and aim of the study
2.4. Materials and methods 48-54
2.5. Results 54
2.6. Humoral immune response 54-68
2.7. Protection study 68-71
2.8. Discussion 71-75

Chapter 3: Xenogenic gama-irradiated pathogen harbouring macrophage based vaccine: prophylactic potential against intracellular pathogen C. neoformans.

3. Introduction 77
3.1. Origin and need of the research 77-78
3.2. Vaccines against fungal pathogens developed thus far 78-79
3.3. Concept behind the study 79-80
3.4. Materials and methods 82-86
3.5. Results 86
3.5.1 Lymphocyte proliferation assay 86
3.5.2. 51Cr release assay 86
3.5.3. Upregulated expression of type I cytokines by immunizing the animals with different forms of vaccine 90
3.5.4. Upregulated expression of IgG1 and IgG2a isotypes by immunizing the animals with different forms of vaccine 90
3.5.5. Xenovaccines augment the expression of co-stimulatory molecules (CD80 and CD86) and memory markers on lymphocyte surface 93
3.5.6. Protection studies 93-98
3.5.7. Survival studies 98
3.6. Discussion 98-102

Chapter 4: Evaluation of fibrin beads for effective and sustained delivery of antigens in combating with experimental murine cryptococcosis.

4. Introduction 104
4.1. Origin and need of the research 104-106
4.2. Aim and scope of the study 106
4.3. Materials and Methods 107-113
4.4. Results 113
4.4.1 Humoral response in mice administered various Cp formulation 113-117
Abstract
