Acknowledgements

I would like to thank my guide Dr. Mohd Israrul Haque who advised me at every stage. From the very inception of the thought of this research work, it was a series of discussions, advice of referring academic literature, constant guidance and above all inspiration, at its best. His patience in reasoning and resolving some of my dilemmas and also coping with the delays in meeting deadlines is something that I really owe as gratitude. This Thesis would not have seen this state, without his pearls of wisdom he gave for undertaking this research work, that are now a part of my thoughts and treasure of knowledge.

I also would like to thank my external guide Dr. Bhupen Srivastava who was always a source of encouragement, making invaluable observations on the work and sharing his vision and vast experience in research and helping me refine my work and keep me on the pathway to completion.

My work would have never been completed without my wife Nilima who looked after me all along ensuring there was coffee while I worked at night and above all had been least demanding for the last four years.

I must convey my sincere thanks to my sons Ravi and Mohit who helped me immensely by being most frank in conveying their ideas to my queries and truly performed the role of ‘Devil's advocate’ assigned to them.

Lastly I must sincerely thank all my other family members and friends who constantly appreciated my endeavor and accepted my absence from several social and other engagements.
