Clinical and etiological profile of acute viral hepatitis among children in Bundelkhand region

Thesis Guide: Dr. R. S. Sethi MD Dch

Case Number:
Name: Age: Sex:
Ward/Bed: MRD No.:
Address:

Chief complaints
Fever Malaise
Anorexia Nausea
Vomiting Abdominal discomfort
Colour of urine Itching
Flu like illness (Headache, Arthralgia, Myalgia)
Icterus of sclera, skin, mucous membrane
Malena Hematemesis

Neurological
Irritability Letharginess
Unconsciousness / altered sensorium
Convulsions

Past History
Of Jaundice in the child
In the family
None

Family History
Mother's education
Illiterate
Less than primary
Father's occupation
   Labourer  Farmer
   Service   Business

Water supply
   Tap water  Well water  Hand pipe

Method of Excreta disposal
   Sanitary latrine  Open field

History of Drug intake if any

Immunization
   Whether vaccinated for
   Hepatitis A vaccine
   Hepatitis B vaccine

General Examination
   Icterus  Pallor
   Cyanosis Clubbing
   Lymphadenopathy Edema
   Maculopapular Rash
   Level of consciousness
   Others

Systemic Examination
   Abdominal examination
   Tenderness in right upper quadrant

Organomegaly
   Liver
     Not palpable
     Palpable
     Size  Consistency
     Tenderness Margins
     Surface
     Upper border of dullness
     Liver span

Spleen
Palpable
Not palpable

Ascites
Present
Absent

CNS Examination
Level of consciousness
Reflexes
Speech
Cranial nerves examination
Motor system examination
Sensory system
Tremors

Respiratory system
Cardiovascular system

Investigations
Routine  Hb  TLC  DLC  ESR
Liver function test  S.Bilirubin, Alanine transferase (ALT), Aspartate transferase
Prothrombin time wherever possible

Diagnostic
Anti HAV IgM antibodies by ELISA kit
Detection of Australian antigen (HBsAg) by Latex agglutination test.
