Acknowledgement

On earth, nothing is possible without the help and will of the ‘Creator’ of this universe, Who created man by an ordinary clot, but then stood by him to learn from nature, taught him to learn from cradle to grave by using pen and taught him which he knew not. First and foremost, I would like to mention my eternal gratitude to Almighty Allah, the omnipotent, omnipresent, omniscient most beneficent and merciful, the greatest helper of all, who blessed me with the patience and strength to accomplish this research effort.

I would like to express my deep sense of gratitude to my teacher and supervisor Dr. Mehtab Alam Ansari, Department of Library and Information Science, who despite of his academic work pressure, personal commitments and family tragedies, always provided me the required guidance, support and encouragement during the whole course of my research period. Being an expert in automation and library software packages, he helped me at every thick and thin to understand and analyze the problems involved in this study. He whole heartedly patted my shoulders and gave me inspirational touch at every point of time during the course of study. I may also mention that there are a lot to teach you academics, but there are very less who besides academics teach you the morality, respect, values, obligation and punctuality. My teacher has been the example in all these respects. Undoubtedly, this formidable task would not have seen the light of the bright day without his nonstop guidance, encouragement, support and inspiration.

I sincerely express my profound gratitude and heartfelt respect to Prof. Shabahat Husain, Chairman, Department of Library and Information Science for lending great deal of cooperation and providing all the necessary facilities during the whole course of my study.

My deep gratitude is also due to Mr. S. Mustafa Zaidi, Dr. Nishat Fatima, Dr. Naushad Ali P.M., Dr. Sudharma Haridasan and Prof. Masoom Raza for their valuable suggestions and cooperation whenever required.

A great deal of understanding, patience, cooperation and untiring help by the non-teaching staff of the department namely Messrs Riaz, Zahid, Shariq, Asif, Joshi, Gulrez, Shamsuzaman and Basant is highly appreciated.
I can not forget the appreciation, encouragement, inspiration and nonstop help of Dr. A. M. Baba, Dy. Librarian, Allama Iqbal Library, Kashmir University who, whenever, I approached to him, has been the role model of my higher studies and this research work.

I owe a word of gratitude to Mr. Riyaz Rufai, Librarian, Allama Iqbal Library, Dr. Sumeer Gul and Mr. Gulam Jeelani for their fruitful suggestions. My special thanks are also due to the Librarians, Faculty, Research scholars and students of IIT Delhi, IIT Kanpur and Kashmir University for their timely cooperation in providing the necessary data for compilation of this thesis.

This research thesis would unquestionably bear the impression of love and affection of my family members. My vocabulary does not seem to be so strong that I will pen down the most appropriate words of my devotion to my parents. Indebtedness is beyond words to my Father Mr. Gh. Ahmad and Mother Fatima Bano, who have been backbone of this research work. My word of gratitude is also due to my brother and sisters who have been pillars of my strength all the way.

I feel short of words to express my feelings of respect and indebtedness from the core of my heart towards my uncle Mr. Abdul Satar whose everlasting cooperation, zeal and zest made me energetic and enthusiastic to make his dream of my ‘Doctorate’ a reality.

This thesis will not be complete without the mention of all those good friends, who stood by me during the course of study despite of their own circles of life. My heartily thanks goes beyond limits to all those, who rendered a helping hand with pleasant smile. They were the gifts from God and firm pillars of encouragement throughout my research study.

There are no boundaries of feelings and gratitude to many other unmentioned persons whom I have not been able to mention due to limitation of space. I offer my sincere thanks to all of them.

I hope that this research effort makes a substantial and original contribution to library automation in general and library software packages in particular.

(Hilal Ahmad Malla)
