B. LIST OF TABLES

Table No.

2.1.1 Biochemical differentiation of the seven species of Salmonella.
2.1.2 Typical biochemical reactions of Salmonella.
2.1.3 Antigens of some representatives of genus Salmonella (Kauffman-White scheme).
2.2.1 Substrate and co enzymes for detecting the important isoenzymes.
2.2.2 Critical studies on the electrophoretic analysis of microbial isoenzymes.
2.2.3 Distribution of pathways of sugar metabolism among certain bacteria.
2.2.4 Electrophoretic analysis of enzymes in enterobacteriaceae - stray reports.
2.2.5 Critical studies on the zymogram of Salmonella studied.
2.2.6 Critical studies on protein profile studied.
4.1 Distribution of Salmonella serotypes from different clinical species.
4.2 Final concentration of antimicrobial agents and solvents used in the test.
4.3 The parameters, variables and critical factors employed in the electrophoretic analysis of bacterial isoenzymes and proteins.
4.4 Standardization of the parameters for the demonstration of bacterial oxido-reductases.
5.1 Association between clot culture and Widal test.
5.2 Serotypes and antigenic analysis of Salmonella isolates.
5.3 Phage types and biotypes of Salmonella isolates.
5.4 Antibiotic resistance among Salmonella to individual drugs.
5.5 Antibiotic resistance pattern among 103 Salmonella isolates.
5.6a Minimum inhibitory concentration (MIC) values (mcg/ml) of S. typhi strains.
5.6b MIC values (mcg/ml) of S. typhimurium strains.
5.7 Phage types and resistance to individual drugs of Salmonella isolates.
5.8 Phage types and antibiotic resistance pattern of Salmonella isolates.
5.9 Frequency of zymogram patterns of Salmonella isolates according to their optical density.
5.10 Frequency distribution of individual enzymes in Salmonella and other gram negative bacilli.
5.11 Electrophoretic analysis of NAD and NADP dependent MDH in S. typhi isolates.
5.12 Electrophoretic analysis of NAD and NADP dependent MDH in S. typhimurium, S. paratyphi A isolates.
5.13 Electrophoretic analysis of NAD and NADP dependent LDH of S. typhi isolates.
5.14 Electrophoretic analysis of NAD and NADP dependent LDH of S. typhimurium isolates.
5.15 Inhibition pattern of isoenzymes of Salmonella isolates.
5.16 Molecular weight of Salmonella and other gram negative bacilli studied in reference to standard reference protein markers on SDS-PAGE.
5.17 MDH zymogram of S. typhi and their Numerical code.
5.18 MDH zymogram of S. typhimurium and S. paratyphi A and their Numerical code.
5.19 Classification of 103 clinical isolates of Salmonella into zymovars based on MDH - enzyme system.
5.20 Enzyme types in the isolates of Salmonella.
5.21 MDH zymogram of gram negative bacilli other than Salmonella and their numerical code.
5.22 Variation in isoenzymes among different phage types of Salmonella.
5.23 MDH zymovars and phage types of 103 clinical isolates of Salmonella.
5.24 Resistance to individual antibiotics and isoenzyme pattern of Salmonella isolates.
5.25 Antibiotic resistance pattern and isoenzyme pattern of Salmonella isolates.
5.26 Average percentage similarity (% S) of Salmonella and other gram negative bacilli.
5.27 Characters of immunizing strain of Salmonella used for raising NAD dependent anti-MDH antibody.
5.28 Range of reactivity of anti-MDH antiserum with CFE and culture supernate of S. typhi isolates.
5.29 Range of reactivity of anti-MDH antiserum with CFE and culture supernate of S. typhimurium, S. paratyphi A isolates.
5.30 Range of reactivity of anti-MDH antiserum with CFE and culture supernate of gram negative bacilli other than Salmonella.
5.31 Diagnostic utility of adsorbed anti-MDH antibody: correlation of culture, Widal test and CIEP results.
5.32 Results of reactivity of anti-MDH antibody with serum samples positive for other gram negative bacilli other than Salmonella.
6.1 Previous reports of Salmonella infection in Solapur.

6.2 Culture and Widal test positivity in enteric fever cases [earlier studies].

6.3 The problem of antibiotic resistance of Salmonella studied earlier.

6.4 Commonest phage types and biotypes of Salmonella isolates studied in India.

6.5 Characters of Salmonella isolate having NAD/ NADP independent MDH in comparison with standard Salmonella strain.

6.6 Characters of Salmonella isolates isolated from different clinical specimen.
