LIST OF TABLES.

Table 1.1 : Comparison of modulation systems.............................................................9
Table 1.2 : Bandwidth efficiency of digital cellular and cordless telephone systems........9
Table 1.3 : Comparison of multiple access schemes....................................................14
Table 4.1 : Regression coefficients for estimating specific attenuation.....................53
Table 4.2 : Distance of threshold value at various frequencies...................................56
Table 4.3: Distance of last dip........................................................................................60
Table 4.4 : Loss in dBm at different distances (2 Ray model ).....................................60
Table 4.6 : Distance of threshold value ( 4 Ray model ).............................................63
Table 4.7 : Loss in dBm at different distances ( 4 Ray model )..................................63
Table 4.9 : Distance of threshold value at various frequencies (8 ray model ).........73
Table 4.10 : Loss in dBm at different distance ( 8 ray model ).................................73
Table 4.11 : Path loss exponent using dual slope regression analysis......................80
Table 5.1 : CMCS specification for capacity estimation operating at 35 GHz.................98
Table 5.2 : Number of voice channels ..........................................................................99
Table 5.3 : Values of $D_n$, $q_n$, $K$ at 35, 50 & 60 GHz...........................................100
Table 8.1 : Performance of relative measurement based
            HO algorithm at 10 Erlang.............................................................................139
Table 8.2 : Performance of relative measurement based
            HO algorithm at 50 Erlang.............................................................................139
Table 8.3: Performance of relative measurement based
            HO algorithm at 100 Erlang..........................................................................139
Table 8.4 : Performance of absolute relative measurement
            based HO algorithm at 10 Erlang..................................................................145
Table 8.5 : Performance of absolute relative measurement
            based HO algorithm at 50 Erlang..................................................................145
Table 8.6: Performance of absolute relative measurement based
HO algorithm at 100 Erlang.....................145

Table 8.7: Performance of direction based
HO algorithm at 10 Erlang..........................148

Table 8.8: Performance of direction based
HO algorithm at 50 Erlang..........................148

Table 8.9: Performance of direction based
HO algorithm at 100 Erlang.....................152
