## LIST OF TABLES

2.1 Functions of various layers of Grid Architecture  
2.2 Some Applications of MOGA  
2.3 Test problem suite  
3.1 Experiment parameters for NTBS  
3.2 Comparison of Average Turnaround Time (in grid seconds) for different schedulers with failure condition  
3.3 Comparison of Average Turnaround Time (in grid seconds) for different schedulers without Failure condition  
3.4 Makespan (in grid seconds) comparison of different schedulers with failure condition  
3.5 Makespan (in grid seconds) comparison of different scheduler without failure condition  
4.1 Experimental values of Average Turnaround Time performance for EHS-Job Retry mechanism with different schedulers  
4.2 Experimental values of Average Turnaround Time performance for EHS-Job Checkpointing mechanism with different schedulers  
4.3 Experimental values of Makespan performance for EHS-Job Retry mechanism with different schedulers
4.4 Experimental values of Makespan performance for EHS-Job Checkpointing mechanism with different schedulers 67

6.1 Simulation parameters for FRAT 97

6.2 Makespan comparison of different combinations of nodes in the form RM:ARM:CPM for a given combinatorial ratio 1:1:3 99

6.3 Makespan comparison of different combinations of nodes in the form RM:ARM:CPM for a given combinatorial ratio 4:4:7 101

6.4 Makespan comparison of different combinations of nodes in the form RM:ARM:CPM for a given combinatorial ratio 1:2:2 102

6.5 Performance comparison of Expected Execution Time of FRAT with various algorithms along job size variation 104

6.6 Experimental values of Expected Execution Time (in minutes) of FRAT with Integrated Algorithm along Failure Rate variation 106

6.7 Average Probability of Overhead Analysis of FRAT with integrated algorithm 107

6.8 Normalized Migration Cost Analysis of FRAT with integrated algorithm 108
