LIST OF FIGURES

Figure 1: General architecture of Wireless Sensor Network .................. 8
Figure 2: Classification of Key Management Protocols ....................... 52
Figure 3: Classification of asymmetric cryptosystems ....................... 53
Figure 4: Classification of Symmetric Cryptosystems ....................... 61
Figure 5: Pseudo code for basic scheme .................................... 67
Figure 6: Pseudo code for q-composite scheme ................................ 69
Figure 7: Pseudo code for multi-reinforcement scheme ..................... 70
Figure 8: Pseudo code for random pair-wise scheme ....................... 70
Figure 9: Pseudo code for random key pre-distribution scheme ........... 71
Figure 10: Pseudo code for Lawrence scheme ................................ 72
Figure 11: Pseudo code for Exclusion Code System ......................... 80
Figure 12: Pseudo code for Asymmetric Pre-distribution scheme ......... 83
Figure 13: Probability of connectivity vs Key ring size in basic scheme .... 104
Figure 14: Probability of connectivity vs Key ring size in ECRKS ........ 104
Figure 15: Memory overhead vs Probability of connectivity .......... 105
Figure 16: Probability of compromised nodes vs Key ring size in basic
          Scheme ........................................................................ 106
Figure 17: Probability of compromised nodes vs Key ring size in
          ECRKS ........................................................................ 107
Figure 18: Percentage of link established during multi hop key
          establishment in ECRKS .................................................. 108
Figure 19: Average transmission distance vs Number of nodes ........................................ 109
Figure 20: Percentage decrease in transmission distance vs Number
of nodes in ECRKS ................................................................. 110
Figure 21: Energy consumed in 1 bit transmission vs Number of nodes ............... 111
Figure 22: Energy consumed in 1 packet transmission vs Number of
Nodes .................................................................................... 111
Figure 23: Energy consumed in 64 bit message transmission vs Number
of nodes ................................................................................. 112
Figure 24: Pseudo code of proposed communication architecture ......................... 137
Figure 25: Data transmission rate vs Transmission range ........................................ 139
Figure 26: Transmission range vs Energy consumed .............................................. 139
Figure 27: Transmission range vs Packet transmission time ................................ 140
Figure 28: Energy consumption of sensors during a single packet
Transmission ........................................................................... 143
Figure 29: Network model for proposed architecture ........................................... 152
Figure 30: Difference in transmission distance vs Number of nodes ................. 174
Figure 31: Difference in transmission distance vs Percentage of
nodes as Cluster Heads .................................................................. 175
Figure 32: Propagation delay vs Number of nodes ............................................. 176
Figure 33: Transmission distance during random and optimal Cluster
Head vs Number of nodes ......................................................... 200
Figure 34: Probability of connectivity vs Storage overhead ............................. 202
Figure 35: Storage overhead associated with various schemes ....................... 203
Figure 36: Scalability ............................................................................. 204
Figure 37: Transmission distance vs Number of nodes.......................... 205
Figure 38: Memory vs Number of nodes.............................................. 206
Figure 39: Energy Consumption vs Number of nodes.............................. 207
