LIST OF TABLES

Table 5.1  Age Distribution of the study population........................................ 93
Table 5.2  Selected characteristics of the study population.......................... 94
Table 5.3  Rural and urban distribution of the study population....................... 95
Table 5.4  Religionwise distribution of the study population.......................... 95
Table 5.5  Educational status of the study population.................................... 96
Table 5.6  Distribution of non-enrollment & school drop out.......................... 97
Table 5.7  Causes of school drop out in the & controls.................................. 97
Table 5.8  Occupationwise distribution of the study population....................... 98
Table 5.9  Socio economic status of the study population................................ 99
Table 5.10 Present age of the husband of the study population......................... 99
Table 5.11 Education of the husband of the study population.......................... 100
Table 5.12 Occupation of husband of the study population................................ 101
Table 5.13 Educational status of the mothers of the study population................. 101
Table 5.14 Occupation of the mothers of the study population.......................... 102
Table 5.15 Educational status of the fathers of the study population.................. 103
Table 5.16 Occupation of the fathers of the study population........................... 103
Table 5.17 Distribution of the study population according to family type............. 104
Table 5.18 Distribution of age at menarche in the study population.................... 105
Table 5.19 Interval between menarche and marriage of the study population......... 106
Table 5.20 SE status and mean age at menarche of the study population............... 107
Table 5.21 Marital status of the study population.......................................... 107
Table 5.22 Age at marriage of the study population........................................ 108
Table 5.23 Causes of early marriage in the study population............................ 109
Table 5.24 Mean age at marriage by various characteristics ........................................... 110
Table 5.25 Interval between school leaving and marriage ................................................. 111
Table 5.26 The study population and parity ................................................................. 111
Table 5.27 Inter pregnancy interval in years ................................................................. 112
Table 5.28 Type of marriage and the study population ................................................. 113
Table 5.29 Decision-maker of marriage in the study population .................................... 113
Table 5.30 Interval between marriage and first pregnancy in the study population ........ 114
Table 5.31 Pre or post marital FP advice received by the study population .................... 115
Table 5.32 Source of FP advice in the cases & the controls ......................................... 115
Table 5.33.1 Family H / O early marriage in the study population .................................. 116
Table 5.33.2 Family H/O early marriage in mother/sister ............................................... 116
Table 5.34.1 Family H/O early pregnancy in the study population ............................... 117
Table 5.34.2 Family H/O early pregnancy in mother/sister ............................................. 117
Table 5.35 Influences for decision making of present pregnancy ................................. 118
Table 5.36 Planned / unplanned and wanted / unwanted pregnancy ............................. 119
Table 5.37 Wanted / unwanted pregnancy and antenatal care ..................................... 119
Table 5.38 Relationship of Unwanted pregnancy with an attempt for MTP in the study population ........................................................................................................................................................................ 120
Table 5.39 Reasons for not undergoing MTP among the mothers with unwanted pregnancy ........................................................................................................................................................................ 121
Table 5.40 History of use of contraceptives by the study population ............................. 122
Table 5.41 Comparison of means of some important indicators in the study population ... 123
Table 5.42 Distribution of the study population according to height .............................. 124
Table 5.43 Status of Hb in the study population ............................................................. 125
Table 5.44  Status of anemia in the study population .................................................. 125
Table 5.45  Antenatal care received by the mothers .................................................. 126
Table 5.46  Distribution of the mothers according to number of antenatal visits .......... 127
Table 5.47  Tetanus toxoid immunisation status in the study population .................. 127
Table 5.48  Consumption of IFA tablets by the study population ............................. 128
Table 5.49  Distribution of risk factor in the study population .................................. 129
Table 5.50  Risk factorwise distribution of the study population ............................... 129
Table 5.51  Distribution of the study population according to daily caloric intake ...... 130
Table 5.52  Distribution of the study population according to working pattern & caloric intake less than 50% of RDA ................................................................. 131
Table 5.53  Daily protein intake in the study population ........................................... 132
Table 5.54  Gestational period of the study population ............................................. 133
Table 5.55  Type of delivery in the study population ............................................... 134
Table 5.56  Distribution of the study population according to single or multiple births. 134
Table 5.57  Sex of the newborns of the young & non-adolescent mothers ................. 135
Table 5.58  Birth weight of the newborns of the study population ............................ 135
Table 5.59  Relation between gestational period & MBW in the study population ....... 136
Table 5.60  Distribution of risk in the newborn of the study population .................... 137
Table 5.61  Congenital anomalies in the newborns of the study population ............... 138
Table 5.62  Distribution of congenital anomalies in the newborns of the adolescent mothers ................................................................. 138
Table 5.63  Perinatal Mortality in the newborns of the study population .................... 139
Table 5.64  Relationship between Apgar score & gestational period in the study population ................................................................. 140
Table 5.65  Early neonatal mortality according to Apgar score in preterm, IUGR & normal birth weight babies .............................. 141
Table 5.66 Early neonatal mortality in VLBW, LBW & normal birth weight babies according
   to Apgar score................................................................. 142
Table 5.67 Postnatal maternal complications in the study population....................... 143
Table 5.68 Comparison of some important indicators in different age groups of the study
   population........................................................................ 144
Table 5.69 Comparison of fetal outcome in different age groups of the mothers............... 145
Table 5.70 Comparison of some of the important maternal factors according to different
   age groups of the mothers.................................................. 147
Table 5.71 Age groupwise indications of LSCS in the adolescent mothers......................... 148
Table 5.72.1 Effect of adequacy of antenatal care on various factors in the teenage mothers.... 149
Table 5.72.2 Effect of adequacy of antenatal care on various factors in the non-adolescent
   mothers................................................................. 150
Table 5.73 Relationship between parity & perinatal mortality in the study population........ 151
Table 5.74 Comparison of some indicators as per parity in the adolescent mothers............ 152
Table 5.75 Correlation of chronologic age, gynecologic age with LBW in the adolescent
   mothers........................................................................ 153
Table 5.76.1 Effect of caloric intake on MBW & proportion of LBW............................... 154
Table 5.76.2 Effect of protein intake on MBW & proportion of LBW............................... 155
Table 5.76.3 Effect of SE status on MBW & proportion of LBW.................................... 156
Table 5.76.4 Effect of antenatal care on MBW & proportion of LBW............................... 157
Table 5.77 Social problems in the study population......................................................... 158
Table 5.78 Information about the parents of the study population.................................. 158
Table 5.79 Other problems observed in the study population......................................... 159
Table 5.80.1 Distribution of LBW & VLBW babies according to high risk score.................. 160
Table 5.80.2 LBW detection at cut off point of '7' ................................................................. 161
Table 5.80.3 VLBW detection at cut off point of '9'.......................................................... 161
Table 5.81 Knowledge about legal age at marriage .......................................................... 162
Table 5.82 Knowledge about dangers of adolescent pregnancy ...................................... 163
Table 5.83 Reasons for not preventing pregnancy in the adolescent mothers ...................... 163
Table 5.84.1 When to start breast-feeding after delivery .................................................. 164
Table 5.84.2 Frequency of breast-feeding ............................................................................ 164
Table 5.84.3 Dangers associated with bottle-feeding ......................................................... 165
Table 5.84.4 Correct age of weaning .................................................................................. 165
Table 5.85.1 Awareness about various vaccines ................................................................. 166
Table 5.85.2 Knowledge about the correct age of administration of vaccines ...................... 167
Table 5.85.3 Knowledge about six Vaccine Preventable Diseases ..................................... 167
Table 5.86.1 Awareness about use of ORT in diarrhea ....................................................... 168
Table 5.86.2 Awareness about feeding during diarrhea in the study population ................ 169
Table 5.87 Awareness about various FP methods in the study population ......................... 170
Table 5.88.1 Awareness about the AIDS in the study population ...................................... 171
Table 5.88.2 Awareness about the mode of transmission of AIDS ................................... 171
Table 5.88.3 Knowledge about the nature of the disease ................................................... 172
Table 5.89.1 Age distribution of the adolescent mothers undergoing MTP .......................... 173
Table 5.89.7 Knowledge of adolescents undergoing MTP about various health aspects ...... 175
