# TABLE OF CONTENTS

1. INTRODUCTION  
   - p53 TUMOR SUPPRESSOR PROTEIN  
   - p53 FUNCTION  
     - Cell Cycle Arrest  
     - DNA Repair  
     - Apoptosis  
     - Angiogenesis, Antioxidant Activity and Metabolism  
   - REGULATION OF p53 TRANSCRIPTION FUNCTION  
   - p53 STRUCTURE  
     - p53 Gene Structure and Organization  
     - p53 Promoter, Expression and Auto-regulation  
     - p53 Protein Structure  
       - p53-N-terminus (Amino-terminus Domain)  
       - p53 Central Core (DNA-Binding Domain)  
       - p53 C-terminus (Carboxy-terminus Domain)  
   - p53 CONFORMATION  
     - Importance in Stabilization, DNA binding and Sub-cellular localization  
   - p53-NTD (AMINO-TERMINUS DOMAIN)  
     - Role in p53 Activation and Stabilization: Post-translational Modifications at N-terminus  
     - Role in Stabilization and Regulation of p53 Activity  
   - Aims and Objectives

2. MATERIAL AND METHODS  
   - MATERIALS  
     - Chemicals  
     - Enzymes, Reagents and Antibodies  
     - Bacterial strains and Bacterial expression vectors  
     - Cell culture reagents, cell lines and mammalian expression vectors  
     - ELISA plates  
   - METHODS  
     - Maintenance of mammalian cell lines and cell culture  
     - Preservation of cell lines/Freeze down preparation  
     - Revival of cell lines  
     - Transient transfection and heat shock treatment  
     - Stable Transfection/Generation of cell lines expressing HA-NTD125  
     - Preparation of nuclear proteins extract and whole cell lysate  
     - Immunofluorescence staining  
     - Western blotting  
     - Immunoprecipitation and co-immunoprecipitation assay  
     - Two Site ELISA (in vivo ELISA) from Cell lysate  
     - Luciferase assay
- Chromatin Immunoprecipitation (ChiP) Assay
- Silver staining: DNA and proteins
  - Silver staining of native polyacrylamide gels for DNA visualization
  - Silver staining of native polyacrylamide gels for protein visualization
- Recombinant protein expression
- Purification of protein by Ni²⁺-NTA affinity chromatography
- Thermal denaturation analysis
- In vitro co-immunoprecipitation and protection assay
- Polyacrylamide gel electrophoresis: Native and SDS-PAGE
  - Native polyacrylamide gel
  - SDS-polyacrylamide gel
- Coomassie Blue staining
- Kination and purification of oligonucleotides
- Electrophoretic Mobility Shift Assay (EMSA)
- Bacterial Cultures
- Preparation of Competent Cells
- Determination of competency
- Transformation
- Plasmid DNA Isolation
  - Mini-Prep
  - Midi-Prep
- Agarose gel electrophoresis and DNA quantitation
- DNA elution from agarose gels
- DNA elution from polyacrylamide gels
- PCR amplification
- Restriction enzyme digestion of DNA
- Ligation

3. RESULTS 44-85
  - NTD125 is natively unfolded and highly thermostable 44
  - NTD125 interacts with WT p53 in vitro 47
  - NTD125 protects and restores wild type conformation of p53 in vitro 49
  - NTD125 protects and restores p53 DNA binding activity in vitro 52
  - Cloning of NTD125, NTD93, NTD61 and NTD55 cDNA in pNHA1 vector 60
  - NTD125 interacts with p53 in cell 62
  - NTD125 also protects wild type conformation of endogenous p53 in cell 63
  - NTD125 stabilizes p53 protein levels and quenches MDM2 67
  - NTD125 localizes in the nucleus 69
  - NTD125 activates p53 gene transcription 71
  - NTD125 induces apoptosis in KB cells 78
  - NTD125 affects the gene expression profile of stably expressing NTD125 KB cells (KB-125) 80

4. DISCUSSION 86-95
5. BIBLIOGRAPHY 96-111
6. APPENDIX
