Acknowledgements

First of all, I would like to thank the God for showering His abundant blessings on me and being my driving force in this research.

Several people consider the completion of their Ph. D. as the end of a journey, for me it’s the beginning of a new chapter with exciting possibilities and thrilling opportunities in the future. Sometimes, the journey is more beautiful than its destination and the same applies here. I have met a lot of people during the course of this long journey and I would like to express my sincere gratitude to each one of them.

Dr. Praful A Patel, Professor, Department of Statistics, Sardar Patel University, your guidance and positive disposition has helped me to solve major issues in my work. Your expert precious and valuable suggestions have helped me a lot to excel in this research. Your perceptive attitude and strong determination are exemplary. I am extremely grateful to you for your generosity and support without which this could not have been possible. I am thankful to you, Sir.

The entirety of my thesis has been completed using R-language. I consider it to have been an enormous benefit. A special thanks goes to Dr. R.D. Chaudhary for teaching me R initially and also helped to troubleshoot some complex R routines which were very important in the research work.

I would like to extend my gratitude to the management and the administrative staff at St Xavier’s College, Ahmedabad for their undying support and consistent motivation in enhancing my academic excellence. Thank you, the Principal of St Xavier’s College, Dr. (Fr.) Robert Arockiasamy, S.J., for inspiring me to undertake this project. A special thanks to Dr. U.B. Gothi, Head of Dept. of Statistics, St Xavier’s College for his unconditional support and irrevocable faith in my abilities and providing all the required assistance without any time constrain. I would like to acknowledge Mr. B.B. Bhadauria, Dr. Nandita Christy, Dr. Aruna
Pandya and Kirtan Parmar for their unconditionally support throughout the entire work.

On a personal note, I am thankful to Prof (Dr.) M. N. Patel, Department of Statistics, Gujarat University for helping me to develop some programs in R.

I am very grateful to Dr. Ashok Shanubhogue, Head of Dept. of Statistics, Dr. Dharmesh Raikundaliya, and the entire staff members of Dept. of Statistics for their kind help whenever required.

I express my deep love to my parents (Chandrakant & Dina) and parents in-law (Ramesh & Nalini), for supporting an encouraging me to achieve this milestone.

And I can never imagine the completion of this work without presence of my daughter Dwija, and she always understood the importance of my work even in her early age and never complain for not spending more time during my last stage of my work.

Finally, patience, faith and love shown by my better-half Sameer was the major driving force for me to complete this journey. Without his support this thesis would have not been completed.

Last but not the least, I am thankful to my family members (Jay, Yogi, Tarak and Vyapti), cousins and friends (Hani, Bhargav) who stood by me in the hour of need.

Shraddha C Bhatt
