LIST OF ILLUSTRATIONS

CHAPTER I

Fig. 1 Patne and Environ with a map of India showing important Upper Palaeolithic sites.

Fig. 2 Longitudinal profile of the Ad Nala

CHAPTER II

Table 1 Typological analysis of 'microliths' from the cutting on the 'Factory' site at Patne (1958)

Fig. 3 Percentage of raw material used in the "microliths" from the factory site cutting at Patne, District Jalgaon (1958)

Fig. 4 Longitudinal section on the right bank of the Dongari Nala in Gaottha Area at Patne (GAOTHYACHI THADI)
Fig. 5  Stratigraphy in a ravine on way to Devi temple at Patne

Fig. 6  Section of a ravine near the Bhundkharak Lavan, Patne

Fig. 7  Cleaver

Fig. 8  Section on the left bank of the Ad Nala at the Dam site, Patne

Fig. 9  Composite section on the left bank of the Ad Nala at Patne

Fig. 10  Middle Palaeolithic tools

Fig. 11  Section of the road-side cutting at Patne

Fig. 12  Cuttings at Patne, 1971-72, Area A
CHAPTER III

Pl. I  General view of the site showing the Gatpayari Dongar in the background and the fluvial flat at its foot, from northwest.

Pl. II  General view of the flat in Area B (in the centre) showing its relation with the gravel bed (in the foreground) and the rock-bench (with whitish surface between the flat and the river bed). In the background is the hill known as Lamdaricha Dongar along the foot of which flows the Lamdari Nala, from north.

Pl. III  General view of the trench PIN-10 on the eastern periphery of the flat in Area B showing the method of "step-technique" of excavation adopted at Patne, from east.

Pl. IV  General view of the trenches laid out in the western part of the flat in Area B, from south.
Symbols used in showing different deposits exposed in the excavated trenches

Fig. 14 PTN-15, PIN-12 and PTN-11
Fig. 15 PTN-6 and PTN-16
Fig. 16 PTN-18 and PTN-19

Pl.V Massive deposit of gravel of Phase III A lying above the yellow kankary silt in trench PTN-6 in Area B, from south

Pl.VI Section facing east of the trench PTN-11. The fissured clay is marked by white calcareous material in the vertical fissures, Area B, from east

Pl.VII Section facing south (against which the figure stands) and west (in front of the figure) of the trench PTN-12, Area B, from south-west

Pl.VIII Trench PTN-15 (the pickaxe rests upon the angular gravel deposit), from south, Area B

Pl.IX The topmost gravel and the underlying loessic silt in trench PTN-18, from east, Area A
The figure is sitting over the yellow kankary silt, from east.

The soil samples collected from the excavated trenches at Patne.

Munsell notations and Munsell colours of the deposits exposed in the excavated trenches at Patne.

Results of Mechanical and Chemical analysis of the soil samples from excavated trenches at Patne.
