ACKNOWLEDGEMENTS

This work has been carried out under the eminent guidance of Dr. Prabha Atre, Head, Department of Music, S.N.D.T. Women's University, Bombay. I am deeply indebted to my respected Guruji, Pandit Arvind Parikh, under whose tutelage I had the privilege to undergo music training. The insight I have gained through this training constitutes an inseparable part of this study. This work could not have been accomplished but for the sophisticated 'Melodic Movement Analyzer', designed and perfected by Dr. Bernard Bel, Centre National De La Recherche Scientifique, Marseille, France. I am grateful to Dr. Bel for his constant encouragement and guidance, personally and through correspondence, throughout the period of this study. The help rendered by Dr. Wim van der Meer, who provided an opportunity to verify my results with an independent system (LVS) at the University of Leiden, Netherlands, is gratefully acknowledged. Elaborate discussions I had with Dr. Wim van der Meer and some of his data related to this work, have been incorporated into this thesis. I express my sincere gratitudes to Dr. S.A.K. Durga, Director, Centre for Ethnomusicology, Madras, for the systematic training I received from her in research methodology and for the constructive criticism offered by her, throughout the course of this work. I am also very grateful to Prof. P.S. Vanjape, Department of Physics, K.C. College, Bombay, who introduced me to the world of acoustics and provided the initial impetus for undertaking
this objective study. This work could not have been possible but for the laboratory facilities and the archival recordings provided by the 'National Centre for the Performing Arts', Bombay. The role played by Mr. D. B. Biswas, Deputy Director (Electronics & Engineering), NCPA, Bombay, by his keen interest and personal involvement in this study deserves a special mention. The importance of invaluable erudite discussions I held with Dr. A. D. Ranade, Deputy Director, Ethnomusicology and Publications, NCPA, Bombay, on many aspects of this work cannot be overemphasized. Technical discussions with Prof. S. S. Bhave, Senior Research Scientist, T. I. F. R., Bombay, and Dr. S. P. Nawathe, Senior Scientific Officer, D. O. E., Delhi, during this study have been very useful. The technical assistance provided by Mr. S. S. Sabnis, NCPA, Bombay, is gratefully acknowledged. Mrs. V. A. Tirodkar, deserves mention for the excellent secretarial assistance.

I am grateful to the University Grants Commission for granting research fellowship for a period of five years from January 1987 to December 1991.
