LIST OF FIGURES

Fig. 1 : Percentage of increase or decrease in antimicrobial activity of the plant extracts at different pH over untreated control.

Fig. 2 : Percentage of increase or decrease in antimicrobial activity of the plant extracts at different temperatures over the untreated control.

Fig. 3 : Percentage of increase or decrease in antimicrobial activity of plant materials at different seasons of the year.

Fig. 4 : Flow sheet diagram for the purification of antimicrobial compounds from M. oleifera.

Fig. 5 : Antimicrobial activity of column eluate fractions from M. oleifera fruit pulp.

Fig. 6 : Flow sheet diagram for the purification of antimicrobial compounds from A. mutica.

Fig. 7 : Antimicrobial activity of column eluate fractions from A. mutica rhizome.

Fig. 8 : U.V. absorption spectrum of compound MA in 50% aqueous ethanol.

Fig. 9 : U.V. absorption spectrum of inactive product of compound MA in dehydrated ethanol.

Fig. 10 : I.R. spectrum of compound AA in Nujol mull.

Fig. 11 : $^1$HNMR spectrum of compound AA in CDCl$_3$.

Fig. 12 : U.V. absorption spectrum of compound AB in ethanol.

Fig. 13 : I.R. spectrum of compound AB in Nujol mull.
Fig. 14: $^1$H NMR spectrum of compound AB in CDCl$_3$.

Fig. 15: Mass spectrum of compound AB.

Fig. 16: U.V. absorption spectrum of compound AC in methanol.

Fig. 17: I.R. spectrum of compound AC in Nujol mull.

Fig. 18: $^1$H NMR spectrum of compound AC in CDCl$_3$.

Fig. 19: Mass spectrum of compound AC.

Fig. 20: Dose response curve of compound MA from *M. oleifera* against *S. cerevisiae*.

Figs. 21 & 22: Dose response curves of compound AA (Fig. 21) and compound AB (Fig. 22) from *A. mutica* against *S. cerevisiae*.
