Acknowledgement

It was one of the most difficult at the same time exhilarating academic tenure to prepare the work behind this PhD thesis. The years spent under the tenure were quite full of self-doubt, anxiety and stress, nevertheless truly challenging enough with a continuous target of achievement! Each day of these years brought up new lessons to surpass illusions, gathering experience and improving thought and at the end of the journey, the once unknown world of NMR got transformed into a fascination and obsession to me! I feel that this change of vision is, to a large extent, due to some beautiful people I met on the way. I would like to exploit this opportunity to thank some of them, though all of them deserve special mention.

First of all, I would like to express my sincere gratitude to Prof. Chaitali Mukhopadhyay, my supervisor for giving me the opportunity to join her group and to introduce me to the exciting world of ‘gangliosides’ and ‘NMR’. You always encouraged and supported me and provided a plenty of room for discussions which often solved tough problems at ease. Thanks for the time you shared as a research guide, a teacher, and a friend. The special outings from lab deserve a special mention, as often these were the powerhouses to regain energy after exhausting working periods.

A special thanks to Prof. Abhijit Chakroborty of SINP, Kolkata. Your advices, discussions and comments often shaped up my problems simple. Thanks for the essential help at the time of preparing GM1 and bicelles and thanks for the consent to work with most of SINP instruments. The style of your interacting with junior colleagues is worth learning.

Combined special thanks go to Mr. Barun Majumdar, Bose Institute, Kolkata and Mr. Sudipto Kishore Goswami, NMR Application Chemist, Bruker. You promptly responded and offered your excellent skills in handling precisely delicate experiments at the time of need. I have to offer special thanks to Prof. Gautam Basu, Bose Institute, Kolkata for allowing me the access to the 500 MHz NMR machine where I did most of my experiments. Thanks for providing the use of Jasco-J-600 CD spectrometer, also.

I gratefully acknowledge Prof. Samir Kumar Pal for the opportunity to use Malvern DLS Instrument and the Lifespec-ps (from Edinburgh, UK) time-resolved instrument. Thanks go to Prof. Soumen Basak for his kind permission in using Jasco-J-720 CD instrument. Prof. Pulak Roy and Mr. Ajoy Chakroborty deserve special thanks for the extensive help in collecting photographs using Hitachi Model (H-600) electron microscope. Prof. Kalipada Das, Bose Institute, Kolkata is acknowledged for the help in using the Malvern DLS instrumental facility.

I owe to the former team of the lab, Dr. Chiradip Chatterjee, Dr. Subhra Ghosh Dastidar, Dr. Silpi Datta, Dr. Debabani Ganguly and Dr. Sunita Mondal, for their continuous
support and encouragement during the early days of my PhD. It is a pleasure to express my appreciation wholeheartedly to my colleagues in lab, Parichita Mazumder, Moutusi Manna, Ummul Liha Khatun, Ipsita Basu, Manoj Mondal and Malay Patro. It is a nice experience to work with you! Special thanks to Dr. Atanu Das, who has now moved to UBC, Canada, for the quality time and friendship I shared with you!

I warmly acknowledge the everwilling cooperation extended by Sabyasachida, Prosenjit Mehboob, Mousumi, Bijan, Amuva, Sasanka, Shankar, Shalini, Debarati, Nitik, Anita and Sreejita during my research tenure.

Of course the two most important persons of life- my Parents deserve special mention for their wishes and support, specially my mother who has put all her life for me with caring and gentle love.

Funding agencies of CSIR and UGC, India have to be acknowledged for providing financial support to handle the expenses to buy chemicals, do experiments, and attend conferences. University Research Fellowship is acknowledged for offering me fellowship.

Finally, I would like to thank my faculties in the Department of Chemistry, University of Calcutta for academic help. The staffs are also acknowledged for technical cooperation during my working period.
