ACKNOWLEDGMENT

The results and interpretation of the study presented in this dissertation are the outcome of my work at the Central Mining Research Station, Dhanbad, during the period of 1962 to 1965.

I am grateful to Dr. K. N. Sinha, Director of this Institute for affording facilities and permitting me to utilise this work for preparing my thesis for D. Phil. (Science) Degree of Calcutta University.

I am deeply grateful to those who very kindly volunteered to participate in this investigation by being experimental subjects. Their sincere co-operation in performing the various complicated and tiring tests were essential factors for the success and worth of this study.

I am thankful to the Superintendent, Central Hospital, Dhanbad, for the facilities offered for the study of some hospital cases. My personal thanks are due to Dr. N. K. K. Menon, Dr. M. N. Ghosh, and Dr. S. N. Mukherji of the same Hospital for their active co-operation and help in the diagnosis of the diseased cases.
I also express my sincere appreciation to the participating mining authorities and Labour Unions for their excellent co-operation.

My sincere thanks are also due to the many people of Central Mining Research Station who have helped me on many occasions during the progress of this work. In this connection I would like to make particular mention of Sarvasree P. K. Dutta, J. P. Gupta, R. N. Sinha (presently Statistician, Central Fuel Research Institute, Jealgura, Dhanbad), P. K. Mullick, P. K. Banerjee, S. C. Guha, S.K. Banerji, M. K. Dutta and J. N. Dutta whose help has been invaluable.

Lastly, I must express my indebtedness and gratitude to Dr. M. K. Chakraborty, M.Sc., D. Phil., Assistant Director of this Station, who has been the constant source of inspiration at every phase of this work through his active guidance and valuable advice.

Central Mining Research Station, Dhanbad.
