</table>
IV. 5 ‘r’ table Showing that the relationship between the academic achievement of higher secondary students in chemistry in total and in different specification such as knowledge, understanding, application and skill and their attitude towards chemistry 135

IV. 6 ‘r’ table Showing that the relationship between the academic achievement of higher secondary students in chemistry in total and in different specification and their scientific aptitude 136

IV. 7 ‘r’ table Showing that the relationship between the academic achievement of higher secondary students in chemistry in total and in different specification and their study habit inventory 137

IV. 8 ‘f’ table Showing the difference among the higher secondary student’s age 17yrs, 18yrs and 19yrs in total and in different specifications such as knowledge understanding, application and skill 138

IV. 9 ‘f’ table Showing the difference among the higher secondary students from boys, girls and co education school in their academic achievement in chemistry in total and in different specifications such as knowledge understanding, application and skill 140

IV. 10. (i) Multiple comparison test (post hoc test) table Showing the difference among the higher secondary students from boys, girls and co education school in their academic achievement in chemistry in total and in respect of knowledge 142

IV. 10 (ii) Multiple comparison test (post hoc test) table Showing the difference among the higher secondary students from boys, girls and co education school in their academic achievement in chemistry in total and in respect of skill 143
IV. 11 ‘f’ table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in different specifications such as knowledge, understanding, application and skill

IV. 12 (i) Multiple comparison test (post hoc test) table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in respect of knowledge

IV. 12 (ii) Multiple comparison test (post hoc test) table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in respect of understanding

IV. 12 (iii) Multiple comparison test (post hoc test) table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in respect of application

IV. 12 (iv) Multiple comparison test (post hoc test) table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in respect of skill

IV. 12 (v) Multiple comparison test (post hoc test) table shows that the higher secondary students from government school, government aided school and unaided school in their achievement in chemistry in total and in respect of achievement
IV. 11 ‘t’ table shows the difference between higher secondary students from rural and urban school in their achievement in chemistry in total and in different specifications such as knowledge, understanding, application and skill 151

IV. 12 ‘r’ table showing the relationship between the laboratory facilities available in the school and in academic achievement of higher secondary students in chemistry in total and in different specification such as knowledge, understanding, application and skill 153

IV. 13 ‘t’ table showing the higher secondary students parents educational level (Literate and illiterate) in their children’s achievement in chemistry in total and in different specifications such as knowledge, understanding, application and skill 154

IV. 14 ‘r’ table showing that the relationship between the socio-economic status and academic achievement of higher secondary students in chemistry in total and in different specifications such as Knowledge, Understanding, Application and Skill 156

IV. 15 ‘t’ table showing the higher secondary students of male teachers and female teachers in their academic achievement in chemistry in total and in different specifications such as knowledge, understanding, application and skill 157

IV. 16 ‘t’ table showing the higher secondary students of teachers with M.Sc., B.Ed., qualification and the teachers with M.Sc., M.Ed., qualification and academic achievement in chemistry in total and in different specifications such as knowledge, understanding, application and skill 159
IV. 17 ‘f’ table showing the higher secondary students of teachers

with upto 2 years, 2 to 4 years experience and 4 years and above in

their student’s academic achievement in chemistry in total

and in different specifications such as knowledge,

understanding, application and skill 161

IV. 17 (i) multiple comparison test (post hoc test) table showing the higher

secondary students of teachers with upto 2 years, 2 to 4 years experience

and 4 years and above in their student’s academic achievement in

chemistry in respect of knowledge. 163

IV. 17(ii) multiple comparison test (post hoc test) table showing the higher

secondary students of teachers with upto 2 years, 2 to 4 years experience

and 4 years and above in their student’s academic achievement

in chemistry in respect of understanding. 164

IV. 17(iii) multiple comparison test (post hoc test) table showing the higher

secondary students of teachers with upto 2 years, 2 to 4 years experience

and 4 years and above in their student’s academic achievement in

chemistry in respect of application. 165

IV. 17 (iv) multiple comparison test (post hoc test) table showing the higher

secondary students of teachers with upto 2 years, 2 to 4 years experience

and 4 years and above in their student’s academic achievement in

chemistry in respect of skill. 166

IV. 17(v) multiple comparison test (post hoc test) table showing the higher

secondary students of teachers with upto 2 years, 2 to 4 years experience

and 4 years and above in their student’s academic achievement in

chemistry in respect of total achievement. 167
IV. 18 ‘f’ table showing the higher secondary students teachers
age with up to 30 yrs, 31 to 36 yrs experience and 37 yrs and
above experience teachers and their student’s academic
achievement in chemistry in total and in different specifications
such as knowledge, understanding, application and skill

IV. 18. (i) Multiple comparison test (post hoc test) table showing
the age of higher secondary students teachers with upto 30 years,
31 to 36 years and 37 years and above age, in their academic
achievement in chemistry in respect of knowledge.

IV. 18 (ii) Multiple comparison test (post hoc test) table showing
the age of higher secondary students teachers with upto 30 years,
31 to 36 years and 37 years and above age, in their academic
achievement in chemistry in respect of understanding.

IV. 18 (iii) Multiple comparison test (post hoc test) table showing
the age of higher secondary students teachers with upto 30 years,
31 to 36 years and 37 years and above age, in their academic
achievement in chemistry in respect of application.

IV. 18 (iv) Multiple comparison test (post hoc test) table showing
the age of higher secondary students teachers with upto 30 years,
31 to 36 years and 37 years and above age, in their academic
achievement in chemistry in respect of skill.

IV. 18 (v) Multiple comparison test (post hoc test) table showing
the age of higher secondary students teachers with upto 30 years,
31 to 36 years and 37 years and above age, in their academic
achievement in chemistry in respect of total achievement.
IV. 19 ‘t’ table showing the relationship between the teaching competency and of teachers and their students’ academic achievement in chemistry in total and in different specification such as knowledge, understanding, application and skill
