The topic of this Thesis was chosen with a view to geo-economic considerations. Being a resident of West Bengal, the choice of a crop-based industry peculiar to the region would naturally fall on Jute, for which the Ganges-Megna delta has held a virtual monopoly in the world, prompting a deeper investigation into the situation, which forms the basis of the subject matter of this Thesis.

As the topic encompasses a wide extent, both physically, in terms of geographical area, and materially in terms of operations and sectors in the transformation of the crop into finished products and conveying the same to its consumers, the task would have proved extremely long and arduous, had it not been for the unstinting co-operation extended by the following persons, whom I wish to gratefully acknowledge and thank in this Foreword.

My guide, Dr. Bireswar Banerjee, M.A., D Lit., Professor of Geography, University of Calcutta, has been a great source of inspiration, encouragement and advice, exhibiting tireless patience over the long tenure of this work, despite his own heavy schedule, and I herein acknowledge and record my deep appreciation and gratitude for all that he has done.

I would also have to offer my thanks to Mr. S.K. Bhattacharya, ex-Chairman of the JCI, now consultant to the JMDC, for all the help extended by him from days of dissertation at the M.A. level and for his helpful introductions to heads and key people of jute institutions, facilitating contact and expediting the process of data collection.

I must also record my gratitude to the following people - Dr. N. Mukherjee (JARI), Dr. N.C. Basu (Joint Director, Directorate of Jute Development), Mr. G. Roy Choudhuri (JMDC), Mr. B. Pande (Deputy Jute Commissioner), Mr. D. Gupta (Managing Director, New Central Jute Mills Co. Ltd.), Dr. Mukherjee (IJIRA), Mr. S. Roy (IJMA), Mr. G. Sivaraman (Director, Anglo India Jute Mills Co. Ltd.), and the Librarians of all the jute institutions, especially the JTRI, JTRL, Directorate of Jute Development, each of whom have in their own fields, contributed advice and data, useful to the work under discussion.

This record of acknowledgement and thanks would be incomplete without reference to the typists, xerox personnel, binders and all the people, too many to name individually who have had some hand in the preparation and compilation of this Thesis.
