ACKNOWLEDGMENTS

I am privileged to record the invaluable co-operation of certain individuals and organizations that enabled me to complete this work.

I gratefully acknowledge Dr. B.H. Sorenson (former Chief Coordinator) and Shri Pandit Pantankar (consultant in community action) of DANLEP (Danida, Assisted National Leprosy Eradication Programme, New Delhi) for opening an opportunity for me to conduct the present study at the DANLEP aided district, Rajnandgaon, in Madhya Pradesh (India). Special recognition is due to Shri Pandit Pantankar, who gave me valuable insights into the process of Community Action at Rajnandgaon. He exposed me to the immense unexplored area of social science research in leprosy, which needs to be documented. At every phase of my field work he interacted with me and enriched my knowledge on Community Action in leprosy, from a behavioral point of view (as he is a behavioral scientist).

I am thankful to the administrators of DANLEP at Durg, and the Leprosy Control Unit, Rajnandgaon, special gratitude to Mr. B.L. Sharma (former Health Education Advisor, DANLEP, Durg) and Dr. G.P. Mishra (District Leprosy Officer, Rajnandgaon), for providing the needful facilities and extending their co-operation in my field work.

I am grateful to Shri J.K. Kalchuri (Health Educator, Rajnandgaon) and Shri P.K. Ram (Senior Health Educator, Rajnandgaon) for closely interacting with me during my entire period of field work.

Special recognition is due to Ms Usha Sinha (NMA, Ghumka sector) who rendered untiring co-operation to me at the field. Despite of
her busy schedule, she assisted me in data collection. She provided me with valuable suggestions, clarified the doubts and gave critical views on my research process. She extended both her moral and physical support as a true friend. I am thankful to the other field workers in leprosy who extended their co-operation and helped in developing case studies from their respective areas:

Shri S.M. Naidu (NMS; Khairagarh block)
Shri Goswami (NMA, Dongargaon block)
Shri R.K. Sharma (NMS, Ghumka block)
Shri Nehru Sharma (NMS, Dongargarh block)
Shri Chandravansi (NMS, Churia block)

I am grateful to Shri Deosingh, Shri Shatrughan, Shri Kesau Srivas, Shri Ravi and Shri Manrakhan (from the local villages) aiding me in the collection of data through interview schedules.

I would be failing in my duty if I did not thank the leprosy affected and cured persons and community members of Ghumka sector who spared time from their work to respond to my queries regarding their perception towards leprosy. I am grateful to leprosy patients and community members of other sectors and block who gave a holistic view of their perceptions toward leprosy and leprosy control programme at the macrolevel.

I am deeply indebted to the University Grants Commission for the sanction of the Junior Research Scholarship that has taken care of the financial aspect of the research. Sincere gratitude is directed to Prof. R.P. Srivatsava (Head of the Department of Anthropology, University of Pune) for granting me the permission of pursuing my Ph. D. study at the department of Anthropology (University of Pune) and for the release of UGC grants from the University at regular periods.
I am grateful to Dr. Saunak Kulkarni (Department of Anthropology) for aiding me in the technical and administrative procedures related to post-graduate studies.

I am thankful to the Centre of Social Science Research in Leprosy, Wardha, for allowing me to conduct a literature survey at their Library and the Foundation for Research in Community Health (FRCH), Pune for providing me reference materials incorporated in the thesis.

Particular appreciation is accorded to Shri Jeeten Pandya (Ajit Print Arts) for using the specially adapted computer software for the analysis of interview schedules, designing charts and tables presented in the study. His patience and painstaking efforts in feeding the data into the computer, formating each page and looking into the technical aspects of the organization of the thesis's contents, has made possible present form of the thesis. I thank Ms. Mary and Ms. Sicily Varghese for typing out the drafts and patiently incorporating the corrections in the matter.

For securing the clear photocopies of the thesis, I thank the D.G. Copiers, Pune, and Mr. Oomen for binding the copies of the thesis.

Special appreciation is due to Dr. Patrick Mano (Instructor, Department of Education, Spicer Memorial College, Pune) for giving valuable suggestion on the clarity of concepts and organization of the thesis chapters.

I gratefully acknowledge those people who though were not directly involved with my study, but were the source of inspiration.
Dr. B.V. Bhanu (Department of Anthropology, University of Poona, Pune) Dr. J.C. Kurian (Vice-President for students' Affairs, Spicer Memorial College, Pune) and Dr. Robin Tribhuwan (consulting Anthropologist, Tribal Research Institute, Pune)

I extend my deep gratitude to my parents who motivated me all along the period of my study and the prayers of my well-wishers for accomplishing my work. Special note of appreciation is extended to my Uncle and Aunt, Mr. & Mrs. C. Soren for their moral support during my stay at Pune, at their residence.

During the entire period of my research, I failed to satisfactorily perform my roles of a wife and mother to my husband and son, respectively. I am greatly indebted to them for their moral support, patience, co-operation and constant motivation at every stage of my study.

Dr. (Mrs.) Mutatkar's contribution in enriching my knowledge about the medical aspects of leprosy cannot go unnoticed. My deep appreciation is extended towards the hospitality I had receiving during my visits to their residence for discussion sessions with my research supervisor.

In closing, I have reserved my special and most grateful acknowledgment to the one who introduced me to this unexplored area of leprosy and suggested the topic of the study. I am referring to none other than my respected teacher and guide, Professor R.K. Mutatkar (Department of Anthropology and School of Health Sciences, University of Poona, Pune). He has enlightened me on various dimensions of leprosy problem. Prior to the present study my knowledge about leprosy was nil. His analytical insights and the depths of thought has enriched me on the broad issues of social sciences and Medical Anthropology and its relevance to researches in leprosy.
I had the special advantage of him visiting the field of the study, Rajnandgaon and participating in process documentation of the present Leprosy Control Programme in collaboration with Shri Pandit Patankar and Dr. Divedi to present the report on "Innovative Practices to NCEP at Rajnandgaon: A case study" to the Department of Health Ministries, Madhya Pradesh.

Thus, much of the intricate issues in the present study were made comprehensible through his report. He not only provided academic guidance but also helped me through my dark and difficult moments especially in solving administrative problems related to submission of the thesis.

Without his unceasing motivation and inspiration this thesis would not have materialized.

Having completed this ritual of acknowledgment, I offer this volume, which I hope will fulfill every earnest expectations.
