List of Tables

Table 1.1 Undernutrition among Children (0-5 years) in Different Regions
Table 1.2: Child (0-59 months) Undernutrition in Different Countries
Table 1.3: Trends in Nutritional Status of Children (0-3 years)
Table 1.4: Indicators of Child Well-being in NFHS-2 and NFHS-3
Table 1.5: Undernutrition in Boys and Girls (WHO (2006) growth standard)
Table 1.6: Undernutrition by Socioeconomic Status and Caste as per IHDS (2005)
Table 3.1: Performance of the Indian States with respect to Average and MSDG of Child Underweight
Table 4.1: Effects of Private Assets and Public Factors (G) on Weight for Age Z-Scores of Children (0-5) in India
Table 4.2: Effects of Private Assets, Public Factors (G) and Interaction on Weight for Age Z-Scores of Children (0-5) in India
Table 4.3: Effects of Private Assets and Public Factors (Components) on Weight for Age Z-Scores of Children (0-5) in India
Table 5.1: Effects of Private Assets, Public Factors (G) and Interaction on Inequality in Weight for Age Z-Scores of Children (0-5) in India
Table 5.2 Effects of Private Assets, Public Factors (Components) and Interaction on Inequality in Weight for Age Z-Scores of Children (0-5) in India
Table 6.1 Population Share-Weighted Contribution of each Wealth Quintile of Children in Total MSDG in the Indian states
Table 6.2 Relative Performance of the Indian States with respect to the Different Concentration Indexes
Table 6.3 Spearman’s Rank Correlation Coefficient Given Pair-Wise
Table 7.1  Child Stunting in Rural India along Single and Multiple Axes of Social Power in Rural India

Table 7.2  Degree of Association (as indicated by Cramer’s V) between Child Stunting and Various Axes of Social Power in Rural India

Table 7.3  Intersection of Region with Each of the Three Axes of Social Power (Caste, Class and Gender) in the Determination of Stunting Among Rural Indian Children

Table 7.4  Difference in the Likelihood of Not Being Stunted (Based on Intersection of Region with Each of the Three Axes of Social Power in Table 3)

Table 7.5  Intersectionality of Gender, Caste and Class in the Determination of Stunting among Rural Children in All, North and South India

Table 7.6  Difference in the Likelihood of Rural Children Not Being Stunted (In All, North and South India)

Table 8.1  Prevalence of Stunting (%) in Different Social Settings in India

Table 8.2  The Intersection of Gender with Religion, Caste and Economic Class in the Determination of Child Stunting in India

Table 8.3  Son Preference and Sex Ratio in Different Social Settings in India

Table A1  State-wise Percentage of Undernourished Children (0-5 Years)

Table A2  Child Undernutrition in India by Background Characteristics

Table A3  Aspects of Some Household-Level Studies Summarized

Table A4  Average and Achievement Index of Undernutrition in the States
