Acknowledgement

And whatever you do, in word or deed, do everything in the name of the Lord Jesus, giving thanks to God the Father through him. -Colossians 3:17

First and foremost, I like to thank my PhD supervisor Dr. Abhijit Chatterjee and my joint supervisor Prof. Sibaji Raha and, for accepting me as a research fellow under their guidance. They gave me intellectual freedom in my work, supported my attendance at various conferences, engaged me in new ideas, and demanded quality of work in all my endeavours.

I offer my sincerest gratitude to my supervisor, Dr Abhijit Chatterjee, who has guided me throughout research work with his patience and knowledge whilst allowing me the room to work in my own way. He was the first person to introduce me in this scientific research field and encourage me to join Bose Institute to study the environmental science. From him I have learned to think critically, to select problems, to solve them and to present their solutions. He never considered me as his PhD student but always treated me as a friend or his family member. One simply could not wish for a better or friendlier supervisor.

Prof Sibaji Raha, whose expertise, understanding and patience added considerably to my research experience. He is not only the director of our institute but also like a giant tree or a big umbrella to me who gave me all my needs regarding my research work and gave freedom as a individual research scholar and always encouraged me to do the better research. I appreciate his vast knowledge and skill in many different areas.

I was fortunate to have the chance to work with Dr. Dipanjali Majumdar from National Environmental Engineering Research Institute (NEERI, Kolkata), who patiently taught me various scientific and analytical techniques and also provided me the necessary scientific equipments whenever I needed them. She is an extremely reliable source of practical scientific knowledge, and I am grateful for her guidance and effort during the preparation of the manuscripts of the research papers and this PhD thesis.

Very special thanks go out to Prof. Sanjay Ghosh, Dr. Amitava Mitra and Dr. Sanat Kumar Das for their moral support and constant encouragement. Sanjay sir who is also our hostel superintendent took the main initiative to sign a MOU between Bose Institute and NEERI that helped me a lot to carry out a major portion of my research work. Mitra sir who
is always a joyful person and a constant motivator and Sanatda who helped me a lot to understand various mathematical models related to my research work.

I am grateful for the funding agencies that allowed me to pursue my PhD work: The University Grant Commission (UGC), Department of Science and Technology (DST) and Intensification of Research in High Priority Areas (IRPHA) project. I recognize that this research would not have been possible without the financial assistance of these funding agencies and I express my gratitude to those agencies.

I like to convey my special thanks to Mr. Bhaskar Ray, Mr. Sabysachi Majee, Miss Debolina Seal and Mrs. Jasodhara Yadav for helping me in various technical works regarding sample collection, analysis and data processing. Especially Mr. Sabyasachi Majee who is also a good friend of mine, without his consistent effort regarding sample collection at Darjeeling this research could not have been done.

To my lab-mates, thanks for the fun and support. My experience in the lab was greatly enhanced by the presence of extremely encouraging and joyful people like Arindam, Adakda, Bhaskar, Debolina, Ishanidi and Saralda. I greatly look forward to having all of you as colleagues in the years ahead. Of all the people I have worked with in the ESS, I will easily miss hanging out with. I only hope my future lab mates have a similarly adventurous taste in music, food and gossip.

Beyond the daily research work and hardship my friends, hostel mates and co researchers made my whole research experience bright and colourful. Arindam, Soumitra, Kinkar, Abir, Deepti, Pritam, Jayanti, Baijaynti, Shankhadeep, Sharonath, Prasenjit, Ayanda, Ananya my school friend Basudev and Rudrajit my childhood friend Arijit (Biltu) they all helped me to stress out and brought joy and enthusiasm in my life. I like to thank all these wonderful people to stand beside me.

I want to thank my parents, my elder brother, my big family (including my Dadu, Dida, Boromashi, Sejomashi, Chotomashi, Meshmosai and Ipudid) and my mother in law. They always encouraged me by asking questions about my research, to be curious about how things work. And, of course, thank you all for your constant supports through the ups and downs of my academic career. Your confidence in me has enhanced my ability to get through it all and succeed in the end. They have passed onto me a wonderful humanitarian lineage, whose value cannot be measured by any worldly yardstick. Most importantly, none of this would have been possible without the love and patience of my family.

I also like to thank Anjanjethu, Ratna jethima, Devid jethu and jethima for their constant prayer, love and inspiration.
The last words I have kept for my other half my wife Shankhamala. I cannot express how much I depend on her. She is my inspiration to every path I chose. Thanks for your understanding and patience while I was far away from you during the period of my research in my lab or the major times when I was at Darjeeling. She has supported me in each and every way, believed in me permanently and inspired me in all dimensions of life. My immediate family, to whom this thesis is dedicated to, has been a constant source of love, concern, support and strength all these years. I would like to express my heart-felt gratitude to my family. All of you made it possible for me to reach this last stage of my endeavour.

Finally above all I like to thank Lord Almighty for numerous blessings he has showered onto me in my entire life and especially during the last 6 years of my research life, and now at the end I am able to write this acknowledgement as the Bible says “Commit your work to the Lord, and your plans will be established” (Proverbs 16:3). I have been blessed by Almighty with these extraordinary people who have spun a web of support around me. Words are not enough in expressing how grateful I am to those incredible people and almighty God who made this thesis possible. Thank you from my heart-of-hearts...

Chirantan
