List of Figures xvii
List of Tables xviii

1 Introduction 1

1.1 History of Software Engineering ............................... 1

1.1.1 The Origins of Software .................................. 2

1.1.1.1 The Early Electronic Computers ......................... 2

1.1.1.2 The Early Days of Software .............................. 2

1.1.2 The Chronological Evolution of Software Engineering .... . 5

1.1.2.1 During 1940s : The Pioneering Era ..................... 5

1.1.2.2 1945 to 1950s : Debated What Engineering Might Mean For Software! ............................................. 5

1.1.2.3 1960s : The Software Crisis and Origins of Software Engineering ................................................ .. 6

1.1.2.4 1970s Synthesis and Antithesis : Formality and Waterfall Processes .................................................. 7

1.1.2.5 1985 to 1989s : No Silver Bullet ........................... 8

1.1.2.6 1990 to 1999s : Prominence of the Internet .............. 9

1.1.2.7 2000 to Present : Lightweight Methodologies ........... 9

1.1.3 Current Trends in Software Engineering .................... 10

2 Some Well Known Software Development Life Cycle Models 12

2.1 Introduction ................................................................ 12

2.1.1 Software Development Life Cycle or Software Process .... 12

2.1.2 Software Development Life Cycle Models or Process Models . 12

2.1.3 Software Development Approaches or Philosophies ........ 14

2.2 Origin of Software Development Lifecycle Models ............ 14
## CONTENTS

2.3 Typical Phases of Software Development Life Cycle ........................................ 15
2.4 Introduction to Software Development Approaches or Philosophies .............. 19
  2.4.1 Iterative Software Development Philosophy ............................................ 19
  2.4.2 Incremental Software Development Philosophy ....................................... 21
  2.4.3 Agile Software Development Philosophy ............................................... 23
2.5 Different Well Known SDLC Process Models ................................................. 25
  2.5.1 Classical Waterfall Model ......................................................................... 26
  2.5.2 Iterative Waterfall Model ......................................................................... 29
  2.5.3 Prototype Model ....................................................................................... 31
  2.5.4 Spiral Model .............................................................................................. 36
  2.5.5 V Model .................................................................................................. 40
  2.5.6 RAD Model ............................................................................................... 42
  2.5.7 RUP: Rational Unified Process Model ....................................................... 46
  2.5.8 Evolutionary Process Model ....................................................................... 50

3 Research Methods in Software Engineering ...................................................... 52
  3.1 Introduction .................................................................................................... 52
  3.2 What Research IS and What NOT ................................................................. 53
    3.2.1 What research IS? ..................................................................................... 53
    3.2.2 What research IS NOT? .......................................................................... 54
    3.2.3 Science Vs. Engineering ......................................................................... 55
      3.2.3.1 Science and Engineering ................................................................. 55
      3.2.3.2 Difference between the Objectives of Science and Engineering Study ......................................................................................................................................................................................... 56
      3.2.3.3 Software Engineering : Science or Engineering? ......................... 56
  3.3 Broader View of Software Engineering Research Paradigm ...................... 58
    3.3.1 Types of Research Paradigms ................................................................. 58
    3.3.2 Types of Research Problem Domain ..................................................... 58
  3.4 Prior Reflections on Software Engineering Research .................................. 60
  3.5 Types of Software Engineering Research .................................................... 61
    3.5.1 Types of General Research .................................................................. 61
    3.5.2 Types of Software Engineering Research ........................................... 62
  3.6 Typical Phases of Research .......................................................................... 63
  3.7 Research Strategies ...................................................................................... 64
    3.7.1 Creating Research Strategies ................................................................. 64

# CONTENTS

5.4 Desired Characteristics of DLC Models ................................................. 87
5.5 Conclusion ......................................................................................... 98

6 BRIDGE: A Model for Modern Software Development Process to Cater the Present Software Crisis .......................................................... 99
   6.1 Introduction ....................................................................................... 99
   6.3 Characteristics of good Software Development Process Model .......... 100
   6.4 Nature of Modern Software Projects ................................................. 101
   6.5 Modern Software Crisis ................................................................. 101
   6.6 Trends in Modern Software Development ........................................ 102
   6.7 Reasons for failure of Traditional SDLC Models: The Shortcomings ... 103
   6.8 Need of Modified Process Model .................................................... 103
   6.9 BRIDGE: The Model for Modern Software Development Process ...... 104
      6.9.1 BRIDGE Process Model Description ........................................ 104
   6.10 Analysis of the BRIDGE Process Model .......................................... 110
      6.10.1 Findings from the Study of BRIDGE Model .............................. 110
      6.10.2 Impact analysis of the findings from BRIDGE Model Study ....... 110
   6.11 Validating the BRIDGE Model in Support of Goodness Criterion ....... 112
   6.12 Suitability of the BRIDGE Process Model ...................................... 114
   6.13 Limitations of the BRIDGE Process Model ..................................... 114
   6.14 Naming Significance: The BRIDGE ............................................... 114
   6.15 Conclusion ..................................................................................... 114

7 Achieving Agility through BRIDGE Process Model: An Approach to Combine the Agile and the Disciplined Software Development ........ 115
   7.1 Introduction ..................................................................................... 115
   7.2 Scope of This Study ........................................................................ 116
   7.3 From Disciplined SW Development Approach towards Agile ............ 116
      7.3.1 Limitations of The Traditional Development Models ............... 116
      7.3.2 Agile Development : The Origin and its Necessity .................... 117
   7.4 Principle of Agile Development ...................................................... 118
   7.5 Introduction to BRIDGE Process Model ........................................ 120
   7.6 Agile Development with BRIDGE Process Model ........................... 121
   7.7 Conclusion ...................................................................................... 126
8 Identifying the Reasons for Software Project Failure and Some of their Proposed Remedial through BRIDGE Process Models
8.1 Introduction ................................................................. 127
8.2 Research Goal and Objectives ......................................... 128
8.3 Definition of Successful and Failed Software Projects .......... 128
8.4 Project Failure Statistics ................................................... 128
8.5 Common Reasons for Software Project Failure and their Categorization ........................................ 130
8.6 Remedial to Project Failure Risks through BRIDGE Process Model ...................................................... 136
8.7 Conclusion ................................................................. 139

9 A Comparative Analysis of BRIDGE and Some Other Well Known Software Development Life Cycle Models
9.1 Introduction ................................................................. 140
9.2 Software Development Approach, Process and Process Model ........................................................................ 141
9.3 Parameter Selection for Comparative Analysis ................ 141
9.4 Comparative Analysis ...................................................... 145
9.5 Conclusion ................................................................. 145

10 SRS BUILDER 1.0: An Upper Type CASE Tool For Requirement Specification
10.1 Introduction ................................................................. 147
10.2 Computer Aided Software Engineering (CSAE) and CASE Tools ............................................................. 148
10.3 Advantages of Using CASE Tools ..................................... 149
10.4 Usage of CASE Tools: A Research Report ......................... 149
10.5 Limitation of CASE Tools .................................................. 150
10.6 Motivation for Undertaking the Research Project ................. 151
10.7 SRS BUILDER 1.0: The New Requirement Specification Tool ................................................................. 151
10.8 Function Hierarchy Diagram of SRS BUILDER 1.0 ............... 152
10.9 Example: Sample SRS Organization Generated by SRS BUILDER 1.0 ............................................................ 152
10.10 Conclusion .............................................................. 153

11 Summary and Conclusion ................................................ 156
11.1 Summary of Work .......................................................... 156
11.2 Concluding Remarks ....................................................... 157
11.3 Future Work ............................................................... 158

Bibliography ................................................................. 159
Appendix A: List of Publications

Appendix B: Copies of Some Publications
