This thesis is the end of my journey in obtaining a PhD. It arose in parts out of years of work I have done since I entered Dr. Kunal Ray’s lab. At the end of my thesis I would like to thank all those people who contributed in many ways to the success of this study and made it an unforgettable experience for me.

First and foremost, I express my sincere gratitude to my supervisor, Dr. Kunal Ray, for having confidence in me and providing me the opportunity to work in his laboratory in the fascinating area of Human Genetics. He gave me the required liberty to think and pursue my interest, taught me the intricacies of research with great patience and guided me to enter a successful and exciting field of research. He has been the true architect in inspiring me to the exciting field of human genetic disorders. He provided me the inspiration and support to enhance my confidence. His way of thinking and working has helped me mature as a person, imbuing qualities that will help me in times to come.

I would like to take this opportunity to thank Dr. Susanta Raychoudhury, for his selfless support, critical comments and valuable suggestions throughout this work. I am also grateful to Dr. Keya Chaudhuri for her selfless help and suggestions whenever needed.

A special note of thanks goes to Dr. Kunal Ray, Dr. Susanta Raychoudhury and Dr. Keya Chaudhuri, for maintaining a common laboratory setup. It just provides immense pleasure and is an incredible experience of working in a joint family, supervision and guidance of three PIs and of course, lots of friends.

I thank Prof. Siddhartha Roy, the director of this institute, for granting me the privilege to continue my work in this esteemed institute.

I am indebted to Prof Nital Bhattacharyya, SIBM, for his contribution in the present study. He is an oasis of idea. His passion for science exceptionally inspires me and has enriched my growth as a student as well as a researcher. I am indebted to him more than he knows.

I gratefully acknowledge Dr. Analabha Basu, NBMBG for his contribution in shaping a major part of my thesis. I am also thankful to Dr. Jharna Ray, University of Calcutta, for her help and suggestion throughout the work.

My special thanks to the faculty members of our institute; Dr. Samit Adhaya, Dr. Rukhsana Chowdhury, Dr. Chitra Datta, Dr. Mohankumar, and Dr. Ashok Giri for allowing me to use their laboratory facilities whenever required. I would also like to thank Dr.Anupam Banerjee for helping me with his skill in handling confocal microscopy.

I must take this opportunity to thank our clinician collaborator Dr. Abhijit Sen and Dr. Keya Sen. They also taught me some of the basics
Acknowledgment

regarding the pathophysiology and diagnosis criteria of the disease POAG, which is the topic of this dissertation.

It gives me immense pleasure to express regards to my seniors who guided me with their valuable experiences. Among them, first and foremost, I express my heartfelt thanks to my seniors Dr. Moulinath Acharya, Dr. Ashima Bhattacharjee, Dr. Arnab Gupta, Dr. Saibal Mukherjee, Dr. Pritha Ghosh, Dr. Moumita Chaki, Dr. Shiladitya Sengupta, Dr. Arunava Bandhopadhaya, Dr. Rajdeep Chowdhury, Dr. Anreyee Saha, Dr. Taraswi Banerjee, Dr. Chaitali Mitra, Dr. Swati Bajaj, Dr. Dipanjana Dutta De for guiding me through the lab benches during the initial years. Dr. Ashima Bhattacharjee deserves a special mention. I started working in this lab under her guidance, and developed a relationship which I will cherish throughout my life.

I consider myself very lucky for getting the company of very supportive co workers in my project: Dr. Suddhasi Mookherjee, who helped me mature my scientific thinking and taught me the experimental intricacies; Dr. Antara Banerjee, whose help I would look forward to, also in years to come for her expertise in experimental designing; The newest member of our group, Dr. Gautami Das and my juniors Subhadip Chakraborty and Mansi Vishal have extended all possible helps whenever required.

I have been blessed with some very special friends during this tenure; Sharmistha Sinha: my lucky charm for western blotting and my ‘funtime’ as well as ‘tough time’ partner. She has been with me whenever I needed and helped me in all possible manners. Maitreyee Mondal, Mansi Vishal I treasure the funtime we shared together, Dr. Mainak Sengupta, senior most member of our lab was just like an elder brother, who has always stood selflessly by my side and provided any sort of help needed. His charming nature helped in creating a friendly environment in the lab. Somsubhra Nath, I am really thankful to him for his critical comment in experimental designing. Sumana Bhattacharjya and Abhishek Chowdhury also deserves special mention for being such great companions.

I would also like to thank my juniors Shaswata and Sangeeta for providing convenient situation for running the sequencing machine at weird hours. I thank Shrutidhi, Abirupa, Sanjita, Udayanda, Tapasi, Pallashri, Debashree, Barnita, Samir, Atul, Sanjibd, Kayum, Arindam, Pinakida, Tania, Debup for maintaining a positive lab environment. I also thank all the assistants and technicians of our laboratory, specially, Suryakanta, Sudipto Da and Arun Da.

I take this opportunity to sincerely acknowledge the Council of Scientific and Industrial Research (CSIR), Government of India, for providing financial assistance in the form of Fellowship which buttressed me to perform my work comfortably.
Acknowledgment

This list is incomplete without acknowledging my school teachers Gargi Bhattacharyya, Chandrima Dasgupta and Anita Mukherjee, who have been the source of inspiration for me in my early days and who taught me many things.

Words are insufficient to express my deepest regards to my parents who have provided me with all the freedom, guidance and emotional support during my entire academic career, particularly during the tough times in my research studies. Their immense sacrifice and hard work has made me the person I am today. My thesis work is entirely dedicated to them and probably the most precious gift I can give them in my lifetime.

I am thankful to my husband whose support in both my personal and professional life has made my task easier, even during tough time. His understanding and co-operative nature will help me achieve my goals in years to come.

Thank you doesn't seem sufficient but it is said with appreciation and respect to my in laws for their support, encouragement, care, and understanding.

I also extend my sincere gratitude to all my family members and friends for their support and good wishes.

Finally, I sincerely thank all the, glaucoma patients and controls, those who have provided me the biological specimens, without which this dissertation will not take its present shape. I hope I have been able to benefit them with my small work on Glaucoma.
