I would like to take this opportunity to express my gratitude to the help and cooperation extended by my friends and well-wishers during the course of my work. First and foremost, I would like to convey my heartfelt regards to my mentor Prof. Sujoy K. Das Gupta for his untiring cooperation. I have immensely benefited from his flair of innovative thinking, a daring and positive attitude and infinite optimism throughout my tenure in this institute. His worthy suggestions, symbolic optimism and unremitting inspirations have compassed my journey (in the field) to the right direction. Whenever problems engulfed me, his encouragement and guidance have always helped me to find the proper way out.

I am deeply obliged to Dr. Maitrayee Das Gupta for her constant encouragement and kind support during the course of this study. I am also thankful to Dr. Subrata Majumder, Dr. Tapan K. Dutta, Dr. Gautam Basu, Dr. Debjani Roy for their assistance. Financial assistance from CSIR, Govt. of India and the Bose Institute is acknowledged. I do thankfully acknowledge Prabirda without whose active support and cooperation this thesis would not have been completed. I would like to thank Swarup, Sheeli, Guinda and Mrinalda for their excellent technical support. I also thank Rameshda and Malayda for looking after daily chores in the lab. My sincere thanks are due to all the staff members of the Department of Microbiology for their generous cooperation. I am grateful to my seniors especially Sujoya, Bidishadi, Twishadi, Abhidita, Abhisitda,Wriddhima, Sukhenda, Bumbada, Archanadi, Mahaswetadi, Nabanitadi. The encouragement and cooperation extended by Arnab, who is more of a friend than my senior, is something that I cannot put down in words. I would distinctly like to thank him for being around to cheer me up in my moments of depression. Words of thanks are inadequate to express my gratitude towards my beloved lab mates cum friends- Pratikviraj, Priyanka, Soumita, Shreya, Soniya, Sourabh, Niketa, Alam, Pyne, Chayan. Their incredible help during my stay in this lab shall always be carved in my memory. I would also like to thank Joydeepda, Madhumitadi, Surojitda, Soumyada, Himal, Soumanando, Prabal, Debajyoti, Pratick, Jayita, Piya, Saikat, Parna, Anupam for their heartiest and unconditional help during my Ph.D. tenure.

A special thanks and tribute to my beloved friend late Abhishek Mandal, who always motivated and inspired me to do a great research work. It’s a long journey, and my father is always just beside me keeping his hand on my shoulder to give all the support what a father can give to his dearest son to see him on the top of the world. My mother’s unconditional love, care and prayers are always with me. I want to express my gratitude to my elder brother who has always supported me in every aspects of my life. He has always motivated me to do my duties sincerely and think rationally.

Last, but not least, I would like to thank my wife Parmita for her unwavering love, patience, and understanding—she allowed me to spend most of the time on this thesis. Her support during the stressfull moments is a testament in itself of her unyielding devotion and love. She already has my heart so I will just give her a heartfelt “thanks.”
