ACKNOWLEDGEMENT

Completing my Ph.D. (Engg.) degree is probably the most challenging activity in my first 31 years of life. The best and the worst moments of my doctoral journey have been shared with many people. It has been a great privilege to spend several years, starting from my Postgraduate Degree to Doctoral Research, at the Department of Production Engineering, Jadavpur University and its members will always remain dear to me. This is to convey my sincere thanks and gratitude to those personalities, who directly or indirectly guided and supported me in various aspects to make this thesis possible.

Words are not adequate to express my gratitude, appreciation and much more, to my thesis advisor, Dr. Shankar Chakraborty, who introduced me in the field of multi-attribute decision-making few years back in my Postgraduate Degree. He has always been there to give me precious guidance and support, whenever I required. A person with a harmonious and positive disposition, Dr. Chakraborty has always made himself available to clarify my doubts despite of his busy schedules and I always believe it as my life time opportunity to do my doctoral research work under his supervision and to learn from his research expertise. The invaluable knowledge and experience that I gained under his guidance, have enriched my understanding, contributed significantly to my academic and professional career, and will continue to do so throughout my life. It goes without saying that without his support, constructive criticisms, advice and persistent encouragement, this thesis would not have been possible. Dr. Chakraborty is the only primary resource for getting my questions answered and has been dynamically instrumental in helping me crank out this thesis.

I am especially grateful to Prof. (Dr.) Bijoy Bhattacharya of Production Engineering Department, Jadavpur University for his advice and suggestions. Fruitful discussions with him have immensely influenced this thesis work.

I am also grateful to Dr. Souren Mitra and Dr. B.N. Doloi, the former and the present Head of the Department, Production Engineering, Jadavpur University for their invaluable support and permissions to use the departmental resources during my entire research work.

I am very much obliged to Mr. Kishan Kejriwal, Managing Trustee, MCKV Institute of Engineering and Prof (Dr.) Parasar Bandyopadhyay, Principal, MCKV Institute of Engineering for their kind support and encouragement during my research work.

I owe a lot to my parents, Mr. Dipak Kumar Chatterjee and Mrs. Kalyani Chatterjee, for their love, encouragement and support in the pursuit of this research work. Without their encouragement, understanding and never-ending support at every stage of my personal and academic life, nothing of this would have been possible.
I also thank my fellow researcher-friends, particularly, Mr. Prasad Karande, Mr. Suprakash Mondal and Mr. Saikat Ranjan Maity for their positive support during this course. I would like to extend my deep sense of appreciation to my friends, particularly, Mr. Abhishek Sarkar and Mr. Suman Samanta, research scholars of Indian Institute of Technology, Kanpur for supporting me throughout my research work.

This thesis would not have come to a successful completion, without the help that I received from the staff members of Production Engineering Department, Jadavpur University. No research is possible without the Library, the centre of learning resources. I take this time to express my gratitude to all the library staffs of this department for their support.

Above all, I owe it all to the Almighty God for granting me the sincerity, health and strength to undertake this research task and enabling me towards its successful completion.
