ACKNOWLEDGEMENT

First of all I am grateful to Almighty Allah for his benevolence and mercifulness which has made this project see the light of day, no matter how much effort I would have made, without Allah's help it wouldn't have been possible to successfully complete my dissertation work.

I would like to express my greatest appreciation towards my dissertation supervisor Dr. Aditi Sharan for her continuous guidance, support and constant faith in me. No matter what new problem I faced, she was always supportive and remarkably perceptive in advising in the right direction and correcting the vital details. She is a great mentor and I learned so much from her through this academic journey. She is the epitome of professionalism and perfectionism. Her excellence and perfection in academics helped me in improving my skills and completing this excellent work. I could not have finished my dissertation in time without her untiring help in making every sentence concise and correct.

I am eternally indebted to my parents and my brother and sister who have done everything possible and went even beyond their capabilities in molding my future and making me a better human being. Their support is vital in any of my endeavors for attainment of better life.

I am grateful to my lab mates Shrivinna, Aparna, Manju who provided me with important suggestions and material regarding my work, and for creating a congenial, harmonious and home like environment for working in the lab.

I am also thankful to my friends Sumaiya, Suhaib, Ibrahim, Zakariya, Faksha, Saif, Syed Shadab, Shadab Ahmad, Zeeshan, Shair, Zaki, Khalid, Obaid, Asad, Tanveer, Zaheer, Safi, Dileep and Nidhi.

Finally, I give my heartfelt thanks to everyone whose name is not mentioned here and has helped me in any way at any point in my life.
