Acknowledgements

The author expresses her deep and sincere gratitude to her supervisor for his inspiring guidance, encouragement and valuable advice. He is not only the master in his own field of Space Science and Communication but also has a profound knowledge in many other areas specially geography and identification of plants. The author is grateful to Dr. Santimay Basu, Air Force Research Laboratory, USA, Dr. Sunanda Basu, Center for Space Physics, Boston University, USA for their valuable advice for the improvement of the work. She also wants to express her sincere gratitude to Dr. Amit Patra, National Atmospheric Research Laboratory (NARL), India, for his kind cooperation.

This research has been sponsored in part by the Council of Scientific and Industrial Research (CSIR) and the Indian Space Research Organization (ISRO) through research projects. The author is grateful to Late Dr. Sudha Ravindran of Space Physics Laboratory (SPL), Trivandrum, India, for providing ionosonde data. She also thanks NARL for supplying MST Radar backscattered data. The GAGAN data were obtained from Space Application Center (SAC), Ahmedabad, India, through a research project. She is thankful to Dr. M. R. Sivaraman and Dr. Kalyan Bandyopadhyay for this data. The author also thanks the Center for Space Sciences at the University of Texas at Dallas, USA and the US Air Force for providing the DMSP thermal plasma data via the website http://cindispace.utdallas.edu/DMSP/. She is thankful to the Advanced Composition Explorer (ACE) MAG instrument team and the ACE Science Center for providing the ACE data through the website http://www.srl.caltech.edu/ACE. She is thankful to Geomagnetic Data Service at the World Data Center for Geomagnetism, Kyoto, Japan for providing the Dst and AE indices through the website http://swdcwww.kugi.kyoto-u.ac.jp/.

The author is thankful to all faculty and staff members of the Institute of Radio Physics and Electronics and the S. K. Mitra Center for Research in Space Environment, University of Calcutta for their co-operation. Special thanks to Mr. Manu Mandal and Mr. Maniklal Das, without whose effort data recording for this research work would not be possible. The author acknowledges the valuable advice and help of Dr. Ashik Paul and Dr. Sarbani Ray of Space Application Technology Laboratory, Institute of Radio Physics
and Electronics. Thanks are due to Mr. Anup Basu and Mr. Sunil Kumar Rana of this laboratory for their assistance. The author thanks Dr. Shyamal Kumar Chakraborty of Raja Peary Mohan College for his valuable advices during the research work. She appreciates the help of her colleagues Tanmay Das and Bidyut Roy in carrying out the work. She also wants to thank Debrup Hui, Center for Space Engineering, Utah, USA, and Dhrubajyoti Bhowmick for their assistance during their tenure of project work in the laboratory. She is also thankful to Rajkumar Hajra, Research Fellow of Raja Peary Mohan College for his help.

The author is grateful to her parents in law for their co-operation. She is also thankful to her husband for his support, perseverance and help throughout the research work. The author pays homage to her late father who is her idol in all aspect of life. Last but not the least, she is indebted to her mother who always shades her from all hard times and without whose sacrifice and tireless inspiration this thesis would not have taken shape.

Aditi Das
