Acknowledgments

First of all I would like to thank my supervisor Dr. Ashok Khar for the encouragement and suggestions he has provided throughout the course of my project. I could always depend on him for support, professional or otherwise. His attitude towards me was one of kindness and understanding.

It is with pleasure that I express my gratitude to the director of CCMRB Prof. S. Balasubramanian. He was very much interested in the progress of my work and always had time for the research fellows despite his busy schedule. Dr. P.M. Bhargava, the former director of CCMRB was a source of inspiration for all of us. I cherish the memories of our Saturday afternoon meetings at his residence. I would also like to thank Dr. Kasbekar for critical discussions and encouragement. To Dr. Dowrishankar I owe a profound debt. He has been a role model by being the very epitome of a true scientist.

My stay in 3-110 has been a very pleasant one and the credit should go to my colleagues Jareena, Jyopakrishna, Leela, Swamy, Rana, Pournima, Padhurasadhy, Hanumanthu and Lakshmamma. The tissue culture group, particularly Varalakshmi and Mubarak made my job a lot easier by providing cell lines and macrophages at the least notice. The research fellow community in CCMRB has been a very close knit one. I have learned a lot from interactions with my seniors Sridhar, Virish, Narahendra, Battananda, Asha, Manka, D. Murali, Chenchal, Rajashree, Amit, Shiva and Papavinasasundaram. Among my batchmates and junior colleagues, I am thankful to Vinisha, Erikanth, Vijji, Krishnaveni, D. Uma, Shubhangi, Shiva Krupa, Akhijit, Hari, Radhika, Sujatha, D. Uma, Rajaram and Arvind for discussions and help in the form of various reagents and experimental protocols.

Narasimha and Erinath provided me with a constant supply of media and sterilized glassware.

I owe a special debt of thanks to Naren, Anil, Susheel, Nambi, Swamyathan, Manjula, D. Srinivas, and Krif for constant encouragement and support. Dr. Ramakrishna Murty, Shankara Narayanan, D.V. Rao, Sanjeev, Sham Sunder and Aparna helped in various ways during the course of my project.
The ease with which we can conduct our experiments in CCMB is the result of the effort of a multitude of people from various support groups. I am grateful to them all but I would like to acknowledge in particular the help rendered by Jayaraman, Nageshvara Rao and Ellesh of the animal house, Khalid, Rahman, Nageshvara Rao and Ramesh of the Photography section and the instrumentation group. Prakash and Bhaskar did the photocopying.

My family was a constant source of encouragement and support without which this work would not have been possible.

I would like to acknowledge both the UGC and CCMB for the fellowships provided.
