LIST OF TABLES

**Table 1:** Total moisture content in the prawn shell

**Table 2a:** Physical and chemical characteristics of *Parthenium* (P), *Croton* (C) and *Parthenium* and *Croton* (PC) compost mixtures at different concentrations

**Table 2b:** Physical and chemical characteristics of *Parthenium* (P), *Croton* (C) and *Parthenium* and *Croton* (PC) compost mixtures at different concentrations

**Table 3:** Total heavy metal content in 25% compost mixtures

**Table 4:** The seed germination capacity of different compost mixtures

**Table 5:** The root growth of ground nut at different compost and soil mixtures

**Table 6a:** Physical and chemical parameters of the significant root growth produced soil with compost

**Table 6b:** Physical and chemical analysis results of soil applied before and after compost

**Table 7:** Total colony forming units in different soil sample mixture
LIST OF FIGURES

**Figure 1:** Map showing the sample collection site (red circled area)

**Figure 2:** Photograph of the common weed plant, *Parthenium hysterophorus* L

**Figure 3:** Photograph of the common weed plant, *Croton sparsiflorus* Morang

**Figure 4a:** Photograph of the shells of the prawn, *Penaeus indicus*

**Figure 4b:** Photograph of the shell powder of the prawn, *Penaeus indicus*

**Figure 5:** Photograph of a typical composting bin

**Figure 6:** Total moisture content in the prawn shell

**Figure 7a, b & c:** Photograph of the color variation of some compost mixtures

**Figure 8:** pH of the three compost mixtures at different concentrations

**Figure 9:** Total Electrical Conductivity (EC) of the three compost mixtures at different concentrations

**Figure 10:** Total moisture content in the three compost mixtures at different concentrations

**Figure 11:** Total Nitrogen content of the three compost mixtures at different concentrations

**Figure 12:** Total Phosphorous content in the three compost mixtures at different concentrations
**Figure 13:** Total Potassium content in the three compost mixtures at different concentrations

**Figure 14:** Total Calcium content in the three compost mixtures at different concentrations

**Figure 15:** Total Magnesium content in the three compost mixtures at different concentrations

**Figure 16:** Total Sulphur content of the three compost mixtures at different concentrations

**Figure 17:** Total Sodium content of the three compost mixtures at different concentrations

**Figure 18:** Total Zinc content of the three compost mixtures at different concentrations

**Figure 19:** Total Manganese content in the three compost mixtures at different concentrations

**Figure 20:** Total Iron content in the three compost mixtures at different concentrations

**Figure 21:** Total Copper content of the three compost mixtures at different concentrations

**Figure 22:** Total Carbon content in the three compost mixtures at different concentrations

**Figure 23:** Total C:N ratio in the three compost mixtures at different concentrations

**Figure 24:** Total heavy metal content of the 25% compost samples

**Figure 25:** Photograph showing seed germination setup
**Figure 26:** (a) Photograph showing irregularly germinated seeds in 20% PC+Pra compost.
(b) Photograph showing non germinated damaged seeds in 25% PC+Pra compost

**Figure 27:** Total seed germination percentage of different compost concentrations

**Figure 28:** SEM photograph of P alone compost surface
