ACKNOWLEDGEMENTS

Though only my name appears on the cover of this thesis, a great many people have contributed to its production. I owe my gratitude to all those people who have made this thesis possible and because of whom my PhD experience has been one that I will cherish forever.

First and foremost I want to thank my supervisor, Dr. Mirajul H.Kazi. It has been an honor to be his first Ph.D. student. He has taught me, both consciously and un-consciously, how to be positive and excel in personal and professional field. I appreciate all his contributions of time, ideas, and funding to make my Ph.D. experience productive and stimulating. The joy and enthusiasm he has for his research is contagious and motivational for me, even during tough times in the Ph.D. pursuit. I am also thankful for the excellent example he has provided as a successful independent researcher and teacher. I hope that one day I would become as good supervisor to my students as Dr. Kazi has been to me.

I also want to thanks Dr. Manoj Kumar Chakraborti, our HOD and Dr. Amit Pal, scientist, for their support and many motivating discussion during my PhD career. I have learned a lot from their advice about life, research and how to tackle new problems at various phase of life. I also appreciate the financial support from Indian Council of Medical Research and Department of Science and Technology, India that funded parts of the research discussed in this dissertation.

I can’t imagine a better junior other than Paramita, Tultul and Joydeep. My work has greatly benefited from their invaluable suggestions, critics and encouragement. The moment that we have spent together especially during lunch time I will treasure for the rest of my life. I am especially indebted to Paramita because of her various nuisance my tolerance level has increased but most importantly I have learnt to admire the love of human for pet that I was previously unaware of.
Special thanks to my colleagues, Rimadi, Rajsekhar, Ayan and Tanusreedi for their support in a very special way. I have gained a lot from them, through their personal and scholarly interactions, their suggestions at various points of my research programme. Very special thanks goes to Asim, Atridi, Bhupeshda, Nimuda and Amershi for providing various chemicals and skillful advice that have immensely helped me to smoothly complete my PhD career. A special acknowledgement to Biplab, our lab technician, for his continuous endeavor in keeping our lab clean and making sure faulty instruments are repaired as soon as possible for smooth running of our research work.

I am also indebted to the summer students I had the pleasure to work with. Special thanks to Sohini Basu and Priyanka Ghosh for coming and helping me in performing mice ileal loop experiment at early morning or on weekend. You people have been an invaluable support day in, day out, during all these years.

Lastly, none of this would have been possible without the unconditional love and patience of my family. My family, to whom this thesis is dedicated to, has been a constant source of love, concern, support and strength all these years. I would like to express my heart-felt gratitude to my family especially my mother. I would also like to give a special mention for the continuous encouragement and psychological support given by friends Kainat, Anindita, Sahana, Tonmoy, Raj and Saugato throughout this endeavor.

Above all, I owe it all to Almighty Allah for granting me the wisdom, health and strength to undertake this research task and enabling me to its completion.
