## Contents

**Chapter-1 Introduction**

1.1. The Cosmology ............................... 1
1.2. Classical big-bang model .................. 2
1.3. Theory of relativity .......................... 3
1.4. Cosmological principle ..................... 5
1.5. Relativistic cosmology ..................... 5
1.6. The accelerating Universe ................. 6
1.7. Inflation ...................................... 7
1.8. Cosmological models ....................... 8
1.9. Spacetime .................................... 8
   1.9.1. Flat spacetime ............................ 9
   1.9.2. Curved spacetime ....................... 9
1.10. Bianchi type spacetimes ................. 10
1.11. Einstein field equations ................... 11
1.12. Energy and Momentum conservation .... 12
1.13. Various fluid distributions in cosmology 12
   1.13.1. Perfect fluid distribution .......... 13
   1.13.2. Viscous fluid and Viscosity .......... 13
   1.13.3. Scalar meson field ................. 14
   1.14.1. Lyra’s geometry ..................... 16
   1.14.2. Scalar tensor theory ............... 17
   1.14.3. String theory ....................... 18
1.15. Geometry of extra dimension .......... 20
1.16. Brane world Model ....................... 23
1.17. Role of exact solutions in cosmology ... 23
1.18. A brief review of some work done in Lyra’s geometry

1.18.1. Various work done in four dimensional spacetime

1.18.2. Various work done in higher dimensional spacetime

1.18.3. Various work done in presence of cosmic string

1.19. A brief review of some work done in scalar tensor theory

1.19.1. Various work done in four dimensional spacetime

1.19.2. Various work done in higher dimensional spacetime

1.19.3. Various work done in presence of cosmic string

1.20. A brief review of some work done in string theory

1.20.1. Various work done in four dimensional spacetime

1.20.2. Various work done in higher dimensional spacetime

1.21. A brief review of some work done in higher dimensional spacetime

1.22. Motivation of the work reported in the thesis

1.23. Consequences of our investigation

Chapter-2 Five dimensional LRS Bianchi type-I string cosmological model in Saez and Ballester theory

2.1. Introduction

2.2. Field equations

2.3. Solutions of the field equations

2.4. Some physical and geometrical properties

Chapter-3 Mesonic stiff fluid distribution in five dimensional Bianchi type spacetimes

3.1. Introduction

3.2. LRS Bianchi type-I spacetime

3.3. Bianchi type-VI_0 spacetime

3.4. Some physical and geometrical properties

Chapter-4 Anisotropic string cosmological models in Lyra’s geometry

4.1. Introduction

4.2. Field equations

4.3. Solutions of the field equations

4.4. Discussions
Chapter 5  Incompatibility of five dimensional LRS Bianchi type-V string and mesonic string cosmological models in general relativity  
5.1. Introduction ......................................................................................................91
5.2. Metric and Field equations ...............................................................................92
5.3. Cosmological solutions of the field equations .................................................93
5.4. Cosmic string coupled with scalar meson field .............................................95
5.5. Discussion .......................................................................................................98

Chapter 6  Higher dimensional effective stiff fluid cosmological models in scalar tensor theory  
6.1. Introduction .....................................................................................................100
6.2. Metric and Field equations .............................................................................101
6.3. Cosmological solutions of the field equations ...............................................102
6.4. Some physical and geometrical properties ....................................................108

Chapter 7  Non-existence of five dimensional string cosmological models in Riemannian and Lyra geometries 
7.1. Introduction .....................................................................................................112
7.2. Field equations and their solutions in Einstein's theory .................................113
7.3. Field equations and their solutions in Lyra's geometry ..................................119
7.4. Discussions ....................................................................................................123

References .............................................................................................................125
