CHAPTER - 8

FUTURE SCOPE FOR STUDY
RECOMMENDATION FOR FUTURE STUDY

I shall like to make following recommendation for further scope of this work:

(i) While conducting the experiments, the parameters like speed, depth of immersion, blade tip angles etc. were considered. Change in rate of oxygen transfer can also be evaluated by varying the distance between the aerators.

(ii) The effect of velocity of water in the ditch is not evaluated in the present study, therefore an attempt should be made in this direction too.
