CHAPTER 13

SCOPE FOR FUTURE WORK

The following additional works can be taken up on the performance of slurry infiltrated fibrous ferrocement.

1. Effect of hybrid fibers on the strength characteristics of slurry infiltrated fibrous ferrocement.

2. Effect of hybrid fibers on the durability characteristics of slurry infiltrated fibrous ferrocement.

3. Behaviour of slurry infiltrated fibrous ferrocement under the chloride attack.

4. Behaviour of slurry infiltrated fibrous ferrocement under the sulphate attack.

5. Behaviour of slurry infiltrated fibrous ferrocement under the acidic attack.

6. Shrinkage characteristics of slurry infiltrated fibrous ferrocement with respect to different fibers.

7. Permeability and sorptivity characteristics of slurry infiltrated fibrous ferrocement with different fibers.
