Preface ix

1 Introduction 1

1.1 Some Preliminaries 2
1.2 Constacyclic codes 4
1.3 Minimal cyclic codes 7
1.4 Euclidean self-dual and self-orthogonal codes 10
1.5 Hermitian self-orthogonal codes and MDS codes 11
1.6 Structure of constacyclic codes 13
1.7 Weight distribution 14

2 Primitive idempotents of minimal cyclic codes of length $p^nq$ 15

2.1 Introduction 15
2.2 $\ell$–cyclotomic cosets modulo $p^nq$ 16
2.3 Evaluation of Primitive idempotents 22
2.4 Dimension, generating polynomial and minimum distance 34
2.5 Examples 38

3 Self-dual and self-orthogonal negacyclic codes over finite fields 45

3.1 Introduction 45
3.2 Preliminaries 46
3.3 Self-dual negacyclic codes 48
3.4 Existence of self-orthogonal negacyclic codes 55
3.5 Enumeration of self-orthogonal codes ................. 60

4 Self-orthogonal constacyclic code and MDS codes ........... 67
  4.1 Introduction ........................................ 67
  4.2 Hermitian self-orthogonal constacyclic codes ............ 68
  4.3 Number of Hermitian self-orthogonal codes .............. 72
  4.4 MDS Hermitian self-orthogonal constacyclic codes over $\mathbb{F}_{q^2}$ .... 79

5 Constacyclic codes of length $p^n q^m$ .................... 87
  5.1 Introduction ........................................ 87
  5.2 Simple root constacyclic codes of length $p^n q^m$ ......... 88
  5.3 Dual codes .......................................... 97
  5.4 Repeated root constacyclic codes of length $p^n q^m \ell^u$ over $\mathbb{F}_\ell$ .... 104

6 The weight distribution of some constacyclic codes ........... 107
  6.1 Introduction ........................................ 107
  6.2 Some Preliminaries .................................. 108
  6.3 Weight distribution of the code $C_s$ .................... 111
  6.4 Some Examples ...................................... 120

Bibliography ................................................. 127
