ACKNOWLEDGEMENT

The author takes this opportunity to express his indebtedness to Dr. R. N. Adhya, Reader in Chemistry and to Dr. N. N. Chakravarti, Assistant Professor of Phytochemistry, School of Tropical Medicine, Calcutta, for their guidance in carrying out the present work. The author expresses his gratitude to Dr. J. C. Saha, Director of Cinchona and other Medicinal Plants, Government of West Bengal, to Dr. J. B. Chatterjee, Director and to Dr. T. Chakraborty, Professor of Chemistry, School of Tropical Medicine, Calcutta, for their encouragement and help whenever required. The author is thankful to Dr. (Mrs.) Maya Sanyal, Head of the Department of Mycology, School of Tropical Medicine, Calcutta for her suggestion during the preliminary investigations of the antifungal activities of some dichloroacetamido compounds, to Dr. S. C. Pakrashi, Indian Institute of Experimental Medicine, Jadavpur, for some i.r. Spectra and to Mr. R. N. Chakravarti, Pharmaceuticals Division, Research Department, Imperial Chemical Industries Ltd., London for microanalysis. The author also thanks his colleagues in the laboratory for help and encouragement.
