Objectives of the study
Objectives of the study

1. To assess and compare the glycemic control efficacy of pioglitazone and metformin when used in combination therapy with secretagogue glibenclamide separately in type 2 diabetes mellitus.

2. To compare the efficacy of pioglitazone in reducing blood glucose level over metformin in monotherapy in early type 2 diabetes mellitus (IGT) pts.

3. To assess the efficacy in of pioglitazone in lowering the dose of insulin when used in combination with insulin than that of metformin.
