	<b>Page No.</b>
<b>Chapter 1 : General introduction</b>	<b>1 - 19</b>
1.1. The Genus <i>Salmonella</i>	4
1.1.1. Classification and Taxonomy	4
1.1.2. Nomenclature	5
1.1.3. <i>Salmonella enterica</i> subspecies enterica	5
1.1.4. Broad-host-range serovars	6
1.1.5. Host restricted serovars	6
1.1.6. Typhoidal <i>Salmonella</i>	6
1.1.7. Non Typhoidal <i>Salmonella</i> (NTS)	7
1.1.8. Morphological characteristics of <i>Salmonella</i>	8
1.2. Review of Literature	9
1.2.1. Background-historical	9
1.2.2. Isolation of <i>Salmonella enterica</i> serovars from different food and clinical sources	10
1.2.2.1. Indian Scenario	10
1.2.2.2. International Scenario	10
1.2.3. Molecular Characterization of <i>Salmonella enterica</i>	11
1.2.4. Pulsed Field Gel Electrophoresis (PFGE) of whole chromosomal DNA	12
1.2.5. Virulence Factors	13
1.2.5.1. <i>Salmonella</i> Pathogenicity Islands (SPIs)	13
1.2.5.2. Toxin	14
1.2.6. Trends of Drug Resistance in <i>Salmonella</i>	14
1.2.7. Stress response of <i>Salmonella</i>	16
1.2.8. Biofilm formation of <i>Salmonella</i>	17
1.3. Objectives of the study	18

<b>Chapter 2 :</b>	<b>Collection, isolation, screening and identification of <i>Salmonella</i> strains from clinical and animal originated food sources</b>	<b>20-38</b>
2.1.	Introduction	20
2.2.	Materials and Methods	22
2.2.1.	Collection, transport and processing of samples	22
2.2.2.	Stool sample	23
2.2.3.	Blood sample	23
2.2.4.	Collection and processing of animal originated food samples	23
2.2.5.	Biochemical identification of <i>Salmonella</i>	24
2.2.6.	Molecular characterization of <i>Salmonella</i>	24
2.2.6.1.	DNA extraction	24
2.2.6.2.	PCR amplification test	25
2.2.6.3.	Electrophoresis	25
2.2.7.	Serogrouping of <i>Salmonella</i>	25
2.2.7.1.	Serotyping	26
2.2.7.2.	'O' antigen detection	26
2.2.7.3.	'H' antigen detection	26
2.2.7.4.	Phase change	26
2.3.	Results	27
2.3.1.	Screening of <i>Salmonella</i> from clinical and different food samples	27
2.3.2.	Isolation of <i>Salmonella</i> from clinical specimens (blood and stool samples)	28
2.3.3.	Recovery of <i>Salmonella</i> in different food samples by biochemical and molecular techniques in various enrichment broth	28
2.3.4.	Distribution of <i>Salmonella</i> in poultry sample	29
2.3.5.	Detection of <i>Salmonella</i> in pork and beef meat sample	30
2.3.6.	Detection of <i>Salmonella</i> in seafood sample	30
2.3.7.	Distribution of <i>Salmonella</i> serovars in different samples	32
2.3.7.1.	Distribution of different <i>Salmonella</i> serovar in clinical samples	33
2.3.7.2.	Distribution of different <i>Salmonella</i> serovars in food samples	33
2.4.	Discussion	33

**Chapter 3 : Antibiotic resistant pattern of *Salmonella enterica* isolated from food clinical samples 39-60**

3.1.	Introduction	39
3.2.	Materials and Methods	43
3.2.1.	Determination of antibiotic resistance profile	43
3.2.2.	Detection of antibiotic resistant gene	43
3.2.3.	Detection and sequence analysis of class 1 integrons	45
3.2.4.	Nucleotide sequence accession number	45
3.3.	Results	45
3.3.1.	Distribution of antibiotic resistant pattern of <i>Salmonella</i> from clinical samples	45
3.3.2.	Distribution of different antibiotic resistant <i>Salmonella</i> serovars in clinical samples	46
3.3.3.	Distribution of antibiotic resistant pattern of <i>Salmonella</i> in food isolates	47
3.3.4.	Distribution of antibiotic resistant <i>Salmonella</i> serovars in different food samples	48
3.3.5.	Antimicrobial resistance genes and their distribution among different serovars	49
3.3.5.1.	Detection of Chloramphenicol resistant gene	49
3.3.5.2.	Detection of Ampicillin resistant gene	50
3.3.5.3.	Detection of Tetracycline resistant gene	51
3.3.5.4.	Detection of Nalidixic acid resistant gene	51
3.3.6.	Presence of class 1 integron	52
3.3.7.	Sequencing of the integrons	54
3.4.	Discussion	54

**Chapter 4 : Molecular characterization of *Salmonella enterica* serovars isolated from different samples 61-78**

4.1.	Introduction	61
4.2.	Materials and Methods	64
4.2.1.	Detection of SPI encoded TTSS containing virulence gene among the isolates	64
4.2.2.	Detection of <i>Salmonella</i> enterotoxin ( <i>Stn</i> ) gene	65
4.2.3.	Pulsed Field Gel Electrophoresis (PFGE)	66

4.3.	Results	67
4.3.1.	Distribution of SPI encoded TTSS containing effector and regulatory genes	67
4.3.2.	Distribution of <i>Stn</i> gene among the <i>Salmonella</i> isolates	70
4.3.3.	Genetic relatedness among the <i>Salmonella</i> serovars by PFGE pulsotypes	72
4.4.	Discussion	75
<b>Chapter 5 : Survival strategy of <i>Salmonella</i> in different stress condition</b>		<b>79-97</b>
5.1.	Introduction	79
5.2.	Materials and Methods	81
5.2.1.	Bacterial strain and culture condition	81
5.2.2.	Culture preparation and inoculation of stains of different <i>Salmonella</i> serovars in various starvation media	81
5.2.3.	Investigation of VBNC state	82
5.2.3.1.	Cell enumeration	82
5.2.3.2.	Live/dead cell count	82
5.2.4.	Resuscitation studies	82
5.2.4.1.	Temperature upshift	83
5.2.4.2.	Reactive Oxygen Species (ROS) scavengers activity	83
5.2.5.	Cell morphological changes under Scanning Electron Microscopy (SEM)	83
5.3.	Results	84
5.3.1.	Culturable count	84
5.3.2.	Survival of <i>Salmonella</i> serovars in Sea water	84
5.3.3.	Survival of <i>Salmonella</i> serovars in River water	84
5.3.4.	Survival of <i>Salmonella</i> serovars in Phosphate buffered saline (PBS)	87
5.3.5.	Survival of <i>Salmonella</i> serovars in Lactose Broth	87
5.3.6.	Live/dead cell analysis	90
5.3.7.	Resuscitation from the non culturable state	90
5.3.8.	Morphology of <i>Salmonella</i> in log and starved phase	92
5.4.	Discussion	93

<b>Chapter 6 : Bile mediated biofilm formation of <i>Salmonella</i> in human gallstone</b>	<b>98-113</b>
6.1. Introduction	98
6.2. Materials and Methods	100
6.2.1. Bacterial stain	100
6.2.2. Quantification of biofilm formation	101
6.2.3. Extraction of Extracellular Polymeric Substances (EPS)	101
6.2.3.1. Bacterial culture preparation	101
6.2.3.2. Extraction of EPS	101
6.2.4. Quantification of Extracellular Polymeric Substances	102
6.2.4.1. Estimation of total sugar molecules in <i>Salmonella</i> EPS	102
6.2.4.2. Protein estimation	102
6.2.5. Inoculum preparation for <i>Salmonella</i> biofilm formation on gallstone	103
6.2.6. Biofilm formation of <i>Salmonella</i> in gallstone	103
6.2.7. Total viable count	103
6.2.8. Field Emission Scanning Electron Microscopy (FESEM) analysis	104
6.2.9. Antibiotic resistant pattern of biofilm forming <i>Salmonella</i>	104
6.3. Results	104
6.3.1. Screening and quantification of biofilm forming <i>Salmonella</i> isolates	104
6.3.2. Screening of EPS producing <i>Salmonella</i> isolates	105
6.3.3. Biofilm formation on the surface of gallstones by <i>Salmonella</i> spp.	106
6.3.4. Estimation of EPS of <i>Salmonella</i> cells from biofilm and planktonic state	108
6.3.5. Antibiotic resistant pattern of biofilm forming and planktonic state of <i>Salmonella</i> cells	109
6.4. Discussion	110
<b>Summary and Conclusion</b>	<b>114-116</b>
