CONTENTS

Abbreviations i

1 Introduction 1
1.1 Biology of GnRH 2
  1.1.1 Mechanism of Action 3
  1.1.2 Biosynthesis 6
1.2 Status of Structural Studies on GnRH 8
  1.2.1 Experimental Approaches 8
  1.2.2 Computational Approaches 11
1.3 GnRH and its Analogs in Medicine 13
  1.3.1 GnRH Analogs: Therapeutic and Contraceptive
       Applications 13
  1.3.2 GnRH Vaccines 14
1.4 Objectives of the Present Study 16

2 Knowledge-Based Computer Modeling of Small
Bioactive Peptides 19
2.1 Conventional Modeling of Peptide Conformation 20
  2.1.1 Energy Calculation 21
    2.1.1.1 Potential Energy 21
    2.1.1.2 Kinetic Energy 23
  2.1.2 Energy Minimization 23
  2.1.3 Molecular Dynamics 25
2.2 Significance of Determining Bioactive Conformation 27
2.3 Knowledge-Based Modeling of Bioactive Peptides 29
  2.3.1 Sequence Alignment 30
  2.3.2 Model Building and Regularization 33
  2.3.3 Recognition of Conformational Patterns 35
  2.3.4 Analysis of Structure-Activity Data 36
3 Modeling of the Bioactive Conformation of GnRH

3.1 Homology Search ........................................ 39
3.2 Model Building ........................................... 40
3.3 Regularization ............................................ 41
3.4 The Common Conformational Pattern ..................... 43
3.5 Structure-Activity Knowledge-Base for GnRH ............ 47
   3.5.1 Natural Amino Acid Substitutions .................. 47
   3.5.2 Position 6 Analogs .................................. 50
   3.5.3 Other Relevant Substitutions ....................... 51
   3.5.4 Structural Interpretations of the Sequence-Activity
   Relationship ............................................. 51
3.6 Description of GnRH Conformation ....................... 54

4 GnRH Structure and Interactions

4.1 Materials ................................................ 62
4.2 Solid Phase Peptide Synthesis .......................... 64
   4.2.1 The Resins ...................................... 65
   4.2.2 Protection of Functional Groups ................... 66
   4.2.3 The Coupling Reaction ............................ 67
   4.2.4 Monitoring of Synthesis ........................... 67
4.3 Synthesis and Purification of GnRH and its
   Deletion Analogs ........................................ 68
   4.3.1 Synthesis of the C-terminal peptides .............. 68
   4.3.2 Synthesis of the N-terminal Hexapeptide .......... 74
   4.3.3 Purification ..................................... 78
   4.3.4 Amino Acid Analysis .............................. 89
4.4 Binding of GnRH and its Deletion Analogs to the
   anti-GnRH MoAb .......................................... 89
   4.4.1 The Binding Assay ................................ 91
   4.4.2 Results and Discussion ........................... 92
4.5 Binding to Ca++ ......................................... 94

5 GnRH Vaccine: Preparation and Evaluation of Various
   Immunogens ................................................. 99
5.1 Materials ................................................. 100
5.2 Synthesis of GnRH Analogs ............................. 102
   5.2.1 Pyr-His-Trp-Ser-Tyr-D-Lys(Aha)-Leu-Arg-Pro-Gly-NH₂
   (DK6) .................................................. 102
   5.2.2 Pyr-His-Trp-Ser-Tyr-D-Cys-Leu-Arg-Pro-Gly-NH₂ (DC6). 105
   5.2.3 Cys-Aha-Pro-His-Trp-Ser-Tyr-D-Ala-Leu-Arg-Pro-Gly-NH₂
   (C1) .................................................. 107
   5.2.4 Pyr-His-Trp-ser-Tyr-D-Ala-Leu-Arg-Pro-Gly-Aha-Cys-NH₂
   (C12) .................................................. 107
5.3 Purification and Characterization of the GnRH Analogs .. 110
5.4 Conjugation of the Analogs to Diphtheria Toxoid ....... 111
5.5 Evaluation of the Immunogenicities of the Conjugates .... 120
