Acknowledgements

This thesis has been a result of good time spent with some of the most wonderful persons in this world, and it is a great pleasure to offer my sincere gratitude to all of them. First and foremost, I would like to express heartfelt gratitude to my supervisors, Dr. Diganta Goswami, Associate Professor and Dr. Jayanta Pathak, Professor for their persistent guidance, constant inspiration, encouragement, the energetic and fruitful discussions during this research work. I am highly indebted to them for their constant critical evaluation and practical suggestions, on the various aspects of this research work, which has made this research work possible.

My sincere thanks go to all the faculty and staff of the Department of Civil Engineering, Assam Engineering College, who have in one way, or the other has been a source of encouragement for me during this study.

I would also like to thank the authors of various books, articles and papers consulted during this study. I would also like to acknowledge the organizers and speakers of various lectures, seminars and programs of IIT Roorkee, ISET and NORSAR, that I had attended which had immensely helped to explore various avenues related to this research topic.

I am indebted to Ritukesh, Pratim, Rimjhim, Bhimlal, Jayanta and Himangshu at Assam Engineering College for providing various suggestions and fun discussions. The help of Pratim in the modeling of the buildings in the SAP2000 software and the suggestions of Rituraaj at IIT Roorkee is duly acknowledged.

I would like to thank my wife Ruby and all family members for the support they showered upon me during this study.

Finally, I would like to thank my respected parents, loving wife and my two kids Nayan (Ron) and Naina (Sneha) for their endless support and caring.

I dedicate this thesis to them.

Sasanka Borah
