Detailed contents

1. Abbreviations

2. Abstract of thesis

3. Review of Literature
   3.1 The Immune system
   3.2 Organs of the immune system
   3.3 Instruments of the immune system
   3.4 T cell activation and differentiation
   3.5 Interleukin-2: An overview
   3.6 IL-2 – Regulatory T cell and tolerance
   3.7 Regulatory T cell mediated immunosuppression in infectious diseases: focus on leishmaniasis
   3.8 History of Leishmaniasis
   3.9 Classification of *Leishmania*
   3.10 Geographical distribution of leishmaniasis
   3.11 Life cycle of *Leishmania*
   3.12 Immunology of visceral leishmaniasis
   3.13 Immunosuppression during visceral leishmaniasis
   3.14 Role of IL-2 as a regulatory factor in visceral leishmaniasis

4. Objectives of the present study

9
5. Materials and Methods

5.1 Leishmania strain and parasite maintenance

5.2 Animals used in the study

5.3 Experimental protocols

5.3.1 Purification of T cells by nylon wool columns

5.3.2 Isolation of CD4$^+$ T cells by positive selection method

5.3.3 Isolation of CD4$^+$ T cells by negative selection method

5.3.4 Preparation and packing of nylon wool columns

5.3.5 Preparation and composition of Gey’s Solution

5.3.6 Setting the T cell proliferation assay

5.3.7 Sandwich Elisa for cytokines

5.3.8 Protocol for Western Blotting

5.3.9 Reverse transcriptase PCR protocol

5.3.10 Procurement of materials required
6. Results

5.1 The kinetics of *Leishmania donovani* infection in BALB/c mice and the development of anti-leishmanial T cell responses.

5.2 Role of T regs during *Leishmania donovani* infection

5.3 Cytokine profile during *L. donovani* infection and identification of the predominant immunosuppressive factor.

5.4 Differential characteristics of T cells derived from early or late phase of infection with respect to anti-leishmanial T cell responses.

5.5 IL-2 is required for the IL-10 dependent suppressive activity of T cells.

5.6 IL-2 works at the priming phase whereas IL-10 works at the effector phase.

5.7 IL-10 hampers IL-12-induced cellular signaling and IFNγ production from T cells.

7. Discussion

8. Appendix I

9. List of publications and awards

10. References
