CONTENTS

Introduction ........................................................................................................................................1
References ........................................................................................................................................22
Materials and Methods of Investigation ..................................................................................30

PART A

Study of kinetics and mechanism of oxidation of cyclic alcohols, viz. cyclopentanol and cyclohexanol by N-chlorosuccinimide in aqueous alkaline medium using Pd(II) chloride as homogeneous catalyst .........................................................35

Chapter 1: ........................................................................................................................................36
Study of determination of order of Pd(II) catalysed N-Chlorosuccinimide oxidation of cyclic alcohols with respect to oxidant in alkaline medium ..................................................................................................................36

Chapter 2: ........................................................................................................................................48
Study of determination of order with respect to cycloalcohols in their oxidation by N-Chlorosuccinimide Catalysed by alkaline solution of Pd (II) ..........................................................................................................................48

Chapter 3 ..........................................................................................................................................57
Study of determination of order of the N-chlorosuccinimide oxidation of cyclic alcohols with respect to Pd (II) used as catalyst in alkaline medium ..............................................................................................................57

Chapter 4 ..........................................................................................................................................67
Study of determination of order of Pd(II) catalysed N-chlorosuccinimide oxidation of cyclic alcohols with respect to [OH−] .................................................................................................................................67

Chapter 5 ..........................................................................................................................................70
Study of determination of effect of addition of mercuric acetate used as chloride ion scavenger on the rate of Pd(II) catalysed oxidation of cyclic alcohols by N-chlorosuccinimide in alkaline medium .........................................................70

Chapter 6 ..........................................................................................................................................73
Study of determination of effect of variation of concentration of potassium chloride on rate of Pd(II) catalysed oxidation of cyclic alcohols by N-chlorosuccinimide in alkaline medium ............................................................................73

Chapter 7 ..........................................................................................................................................76
Study of determination of effect of variation of temperature on rate of Pd(II) catalysed oxidation of cyclic alcohol by N-chlorosuccinimide in alkaline medium .........................................................................................76

Chapter 8 ..........................................................................................................................................83
Interpretation of results and elucidation of reaction mechanism as well as rate derivation ..........83
PART B

Kinetics and mechanism of Pd(II)catalysed oxidation of glycols, viz. ethylene glycol, propylene glycol and 1,3- butylene glycol by potassium bromate .................................................................89

Chapter 1 ..........................................................................................................................90
Study of determination of order of Pd(II) catalysed oxidation of glycols with respect to potassium bromate used as oxidant in acidic medium .................................................................90

Chapter 2 ........................................................................................................................103
Study of determination of order of Pd(II) catalysed potassium bromate oxidation with respect to glycols used as reducing agents in acidic medium ................................................................................103

Chapter 3 ........................................................................................................................116
Study of determination of order of oxidation of glycols by potassium bromate with respect to Pd(II) used as catalyst in acidic medium .....................................................................................116

Chapter 4 ........................................................................................................................128
Study of determination of order of oxidation of glycols by potassium bromate with respect to hydrogen ions in the presence of Pd(II) as catalyst ....................................................................................128

Chapter 5 ........................................................................................................................131
Study of determination of effect of variation of concentration of potassium chloride on rate of Pd(II) catalysed oxidation of glycols by potassium bromate in acidic medium .........................................................131

Chapter 6 ........................................................................................................................142
Study of determination of effect of variation of ionic strength of the medium on the rate of Pd(II) catalysed oxidation of glycols by potassium bromate in acidic medium .................................................................142

Chapter 7 ........................................................................................................................146
Study of determination of effect of addition of mercuric acetate on the rate of Pd(II) catalysed oxidation of glycols by potassium bromate in acidic medium .....................................................................................146

Chapter 8 ........................................................................................................................150
Study of determination of effect of variation of temperature on rate of Pd(II) catalysed oxidation of glycols by potassium bromate in acidic medium .....................................................................................150

Chapter 9 ........................................................................................................................159
Summary of observed kinetic results, discussion for elucidation of reaction mechanism and derivation of rate law .................................................................................................................................159

Publications ....................................................................................................................167
