Abstract	VIII
List of Abbreviations	IX
List of figures	XI
1. Introductory Review	1
1.1 Neurodegenerative Diseases	2
1.2 Alzheimer's Disease	4
1.2.1 Discovery of Alzheimer's Disease	4
1.2.2 Etiology of Alzheimer's Disease:	5
1.2.3 Early Onset Alzheimer's Disease	6
1.2.4 Late onset Alzheimer's Disease	6
1.2.5 Epigenetics	7
1.2.6 Environmental risks	7
1.3 Neuropathological Hallmarks of Alzheimer's Disease	8
1.3.1 A β as a hallmark of Alzheimer's disease	8
1.3.2 Neurofibrillary tangles	10
1.4 Hypotheses of AD Pathogenesis	11
1.4.1 Cholinergic hypothesis	11
1.4.2 The Amyloid cascade hypothesis	12
1.4.3 The Tangles hypothesis	13
1.4.4 Other hypotheses	13
1.5 Autophagy	14
1.5.1 Chaperone-mediated autophagy	15
1.5.2 Microautophagy	15
1.5.3 Macroautophagy	15

1.5.4	Molecular Mechanism of Autophagy	16
1.6	Autophagy in Neurodegenerative Diseases	18
1.7	Apoptosis	19
1.7.1	Molecular Mechanism of Apoptosis	20
1.8	Apoptosis in Neurodegenerative Diseases.....	23
1.9	Cross Talk between Autophagy and Apoptosis	23
1.9.1	Autophagy and Apoptosis in Alzheimer’s Disease	26
1.10	Tribbles family of proteins	29
1.10.1	The TRB3/Trib3 Protein.....	31
1.11	References.....	35
2.	Rationale and Aims of Thesis	47
3.	Methodology	50
4.	Chapter I: The essential role of Trib3 in neuron death in AD model	61
4.1	Introduction.....	62
4.2	Results	65
4.2.1	A β treatment induces Trib3 mRNA and protein levels <i>in vitro</i> and <i>in vivo</i>	65
4.2.2	Trib3 plays an essential role in neuronal death evoked by A β	68
4.2.3	Trib3 negatively regulates Akt upon A β treatment:	70
4.2.4	Feed forward regulatory mechanism acts between Trib3 and FoxO1	73
4.2.5	Trib3 further downstream regulates pro-apoptotic gene bim in neuronal cell death induced by A β	75
4.3	Discussion	78
4.4	References.....	82
5.	Chapter II: Trib3 regulates autophagic neuron death in response to Amyloid-β..	86
5.1	Introduction.....	87
5.2	Results	90
5.2.1	Trib3 induces autophagy in neurons evoked by A β via the Akt-mTOR pathway .	90
5.2.2	Trib3 induces formation of autophagosomes in neuronal cells in response to A β .	92
5.2.3	Trib3 causes impaired autophagic flux in neurons exposed to A β	94

5.2.4	Overexpression of Trib3 is sufficient to cause neuronal cell death whereas downregulating it promotes neuronal survival.....	98
5.3	Discussion	101
5.4	References.....	103
6.	Chapter III: Understanding the cross talk between autophagy and apoptosis during neurodegeneration	107
6.1	Introduction.....	108
6.2	Results	111
6.2.1	Cellular models used for the study of neurodegeneration	111
6.2.2	Induction of both autophagy and apoptosis in neuronal PC12 cells in response to NGF deprivation and A β treatment	112
6.2.3	Selection of effective doses of Rapamycin and 3-Methyl Adenine to induce and inhibit autophagy respectively	114
6.2.4	Inhibition of autophagy provides protection to neuronal cells undergoing degeneration.....	116
6.2.5	Inhibition of both autophagy and apoptosis confers increased protection to neuronal cells	117
6.2.6	Beclin1 is cleaved by caspase3 in response to NGF deprivation or A β treatment	119
6.2.7	Cleaved fragment of Beclin1 translocates to the mitochondria and is essential for neuron death.....	121
6.2.8	Beclin1 is regulated by Trib3 in neuronal cells upon A β treatment	124
6.3	Discussion	126
6.4	References.....	130
7.	Summary.....	133
7.1	Summary of Chapter I	134
7.2	Summary of Chapter II.....	135
7.3	Summary of Chapter III	136
8.	Conclusive Discussion.....	137
9.	List of Publications	140
10.	Reprint of Publications.....	142
11.	Awards and Certificates	167
