ACKNOWLEDGMENTS

It is while conveying gratitude that one finds it difficult to express himself. However, with your permission may I ..... 

Dr Vasanthakumari P: My teacher and guide, for what should I be most thankful to you? Is it for your unfailing patience, wisdom, guidance, timely interferences when I sauntered away from my goal or for reminding me that I must not be enchanted by the lovely dark and deep woods because I have promises to keep and miles to go before I could sleep? I do not know. But I prefer to remember your never having even the slightest expression of condescension while accepting my not so great arguments and explanations. It is Jesus Christ who said no disciple is greater than the teacher, for when all learned he becomes as good as the teacher only. I am at loss in estimating the number of lives I have to live through before I become equal to you. Thank you, teacher! You once told me that solution to every issue that may crop up during the progress of this work will appear before me in the form of a person or some academic document, which I believed blindly. The following paragraphs are proof for the first part of your blessing, I mean, about the persons (about the academic documents, I have produced ample evidence during the many hours of discussions).

Dr. PL Antony: My friend and senior colleague from the Department of Mathematics of St Thomas College, Thrissur, for his timely comments on the intricacies of mathematical side of various equations I had to tame during the progress of this thesis work. He, with mischievous sparkle in eyes, always encouraged me by being a patient listener to the discussion points on the schedule of questions, and various indicators used for evaluating the variables of this Study, that too without ever giving away the slightest indication that the more I explained, the more I confused him. Without his patience, the Third Chapter of this Thesis would have been more grotesque. Many a time, he patiently listened and made suggestions about dealing with various problems I encountered during the time of primary data collection. I unfailingly proved to be a not so good a learner when he attempted to train me on the techniques of framing mathematical equations. Dr Antony, who has never been profligate with smile, crosses the restraint only when he hears silly doubts on Maths, especially, from researchers belonging to the discipline of Social Sciences. I gave him countless chances to laugh out loudly, which made his otherwise
serious face blossom into expressions of wonder also (about the extent to which a layman can be naïve, of course). Thank you, Dr PL Antony.

Prof MC Jose, Associate Professor in Statistics, St Berchman’s College, Chenganachery, Kerala: my long time friend gave patient explanations for every doubt about the statistical implications of the secondary as well as primary data along with a number of breakfasts and dinners at his residence. He burned countless candles during midnight, and kept awake all the time I visited him for discussion. More unbelievable is the fact that he never yawned during the time we sat together for discussions during the small hours of the mornings. Prof Shanthy Jose, his spouse, prepared many breakfasts, dinners and black coffees during my discussions with Prof MC Jose. Special thanks to Prof Shanthy Jose.

Dr TM Jacob, Associate Professor in Statistics, Nirmala College, Muvattupuzha, Kerala: for finding time for discussing the nuances in statistics which made some of the statistical tools more meaningful in my thesis.

Dr Joju KT, Associate Professor in Mathematics, Prajyothi Niketan College, Pudukkad, Kerala: a long time friend of mine visited me and helped with the necessary mathematical support in framing indices used in this thesis. His timely suggestions kept the seventh chapter of the thesis within the limits of readability. He patiently listened to the unending explanations of the analytical framework of the Thesis, which he was supposed to help me to convert into mathematical scheme. He did it meticulously. Thanks, Joju. Special thanks to the prayers you offered.

Dr Sandhya, Associate Professor in Statistics, Prajyothi Niketan College, Pudukkad, Thrissur District: thank you for explaining the intricacies of several statistical aspects applicable in my Thesis.

Mr. Anilkumar, Centre for Developmental Studies, Trivandrum: thanks for helping me to locate specific documents necessary for the thesis work during my stay at CDS.

Mr M Sukumaran, Dy. SP in Kerala Police: For opening up the umbrella of protection while navigating the labyrinths of allies in the villages of Palakkad District and for the idea of convening the meeting of respondents in a common place in order to speed up the process of
data collection, which, otherwise, would have taken the lion's share of the time and energy of mine.

Mr. Riaz Yahiakhan, my friend: For speeding up the analysis of Primary Data by helping me with SPSS. For him there are only two kinds of people in this world; those who can take statistical output by using SPSS and those who cannot. He performs on SPSS at the drop of a hat. For that matter, I don't wear a hat; therefore, belong to the second group. He helped me religiously without ever failing to remind me at every available occasion that he did great acrobatics on SPSS. Thank you Riaz (I can hear you laughing out loud).

My Father, thank you for teaching perseverance and inculcating the belief that studies will lift me out of starvation. My mother, thank you for convincing that the poor can be respectful and poverty is something that can be surmounted. Thank you once more for falsely convincing me during my childhood that elders do not feel that much hunger; especially during occasions when you had to turn upside down the empty utensils after serving for the 'others' in the family...

Jemma, my wife: for bearing the brunt of my worries about the questions that surfaced almost every day during the period of my research.

Ann and Lucy - my daughters - who stubbornly refused to believe that any Ph D in the world will stand a chance before eighth standard mathematics: I thank them for the many ice creams, leisure trips and evening assemblies at home they lost. Special thanks to Lucy for ensuring that the figures explained in the analysis part are compatible with the figures given in the respective tables of various chapters of this Thesis. Her help was very unique, only that I had to concede to every demand of hers that resulted in hefty increase in the “personal allowance”, which previously used to be monthly, but after the thesis, happens to be every now and then, And, Elizabeth - the toddler who decided to join our family during the final stage of the construction of this thesis - for handing over the chair in front of the PC to me (not always happily), whenever I requested with all humbleness at my command, to continue with the typing work of this thesis.

Respondents of the Survey, thank you for making it a point to come to the meetings and patiently filling the Schedule. You taught me one important lesson in my life—it is the poor who
are more likely to be punctual and be more helpful, especially when they are convinced that their small deeds will be meaningful to someone else.

The officials at various Municipalities, Corporations and Panchayaths of Trivandrum Kottayam and Palakkad: thank you for welcoming me when I visited your offices, in spite of the fact that many a time my presence beside you caused delay in your official work.

The authorities at St. Thomas’ College (Autonomous), Thrissur, Kerala: thank you for permitting to go on with this research.

Joseph from TVM, Shyam from Kottayam and Shameer Mohammad from Palakkad navigated me through these respective districts during the days of primary data collection. Thank you my young friends.

Mr Pauly Manjaly, proprietor of Educare Infortech, Thrissur, you finalised the physical form of this Thesis. You patiently and meticulously formatted the typed version of this Thesis. Thanks, Pauly.

Finally, the reader of this thesis, I do not know what difference this thesis or the degree I am going to get after its submission is to bring in my outlook or life. But, I am sure that it is ‘Time’ that taught me the necessary skills required for writing this; when sharpened with the timely interferences of many, some of whose names I have not mentioned here, the outcome is this set of arguments. If you find these arguments helpful in producing at least a sparkle of thought while you travel along the same path, I would be happy. You have every freedom to disagree with the arguments set in this Thesis, either on account of the conceptual basis or on account of the errors that you may find. About the errors, I reserve all rights for myself. I will not, under any circumstances, share the responsibility for errors. About conceptual disagreements, I wish you all the best for better arguments and findings. God bless you, because this work itself is ample proof for His blessings in my life.

Paul Jose P
