Acknowledgements

“For every minute that I spin, there is in me the consciousness that I am adding to the nation’s wealth.”

– Mahatma Gandhi

First of all, I am indebted to this person who has made such indelible mark on humanity and almost every aspect of social life, that wordy appreciation on this earth would fall short in his praise. His concern for the poorest and the weakest has everlasting impression on my mind.

I have not traveled in a vacuum while compiling this thesis. There are some people who made this journey easier with words of encouragement and more intellectually satisfying and helping me by expanding my theories and ideas.

First, I would like to express my deep and sincere gratitude to my teacher, my guide, my supervisor and the mentor Dr. Sheo Mohan Prasad. His wide knowledge and logical way of thinking have been of great value for me. His benevolent and compassionate attitude, keen interest in the progress of my work, helpful suggestions and erudite criticism throughout the progress of my work have been a source of perpetual inspiration to me. He challenged me to set my benchmark even higher and to look for solutions rather than focusing on the problems. Not for him the tantrums of the supervisor, just quiet dedication to a task, indomitable attitude that he so obviously loved. Being insatiable, he never accepted less than my best effort. I have learned from him to believe in my work, myself and my future.

Ex-heads Late Prof. P. K. Khare, Prof. D. R. Misra and Prof. Nupur Bhownik gave me the confidence and support to begin my journey as a student and research scholar and Prof. D. N. Shukla (Head) has been lending a helping hand all through. Their noble views on classical as well as contemporary plant science have always prompted me to work honestly despite of so many distractions around and a note of thanks would seem insufficient but is said with indebtedness and reverence.

Then a special thanks to my esteemed teachers Prof. G. K. Srivastava, Prof. B. Lal and Prof. G. L. Tiwari (ex-heads); Prof. Monica Basu, Prof. D. K. Chauhan, Prof. Anupam Dikshit, Prof. Manju Sahney, Dr. G. Kumar, Dr. N. B. Singh, Dr. H. K. Kehri, Dr. S. P. Tiwari and Dr. Satya Narain whose understanding,
encouraging and constant cooperation has provided a good basis for the present thesis. I really admire their scientific attitude that motivated my pace and passion to work harder. Their personality and identity is enough to guide us persistently. Besides, their affection and timely invaluable advice has been a backbone to this thesis work.

I would thank my Institution, University of Allahabad where I completed my graduation, post-graduation and presently pursuing D. Phil. I wish to acknowledge my appreciation and thanks to University Grants Commission for awarding me the Junior and Senior Research Fellowship (JRF/SRF) during the tenure of this work. Special thanks to the authors and researchers mentioned in reference chapter, without whom this work would have taken years of my life. I would also like to express my indebtedness and would appreciate the endeavor of anonymous reviewers of my research papers whose helpful suggestions and learned criticism had a definite role in improving my work, the eloquence of the manuscript of the research papers and the present thesis too. I am also highly indebted to Prof. B. R. Chaudhri, Department of Botany, Banaras Hindu University, Varanasi for his kind permission for taking photographs of studied cyanobacteria.

During the thesis work, I realized that Dr. Mohd. Zeeshan, Dr. M.P.V.V.B Singh, Dr. Deelip Kumar, Dr. Vagish Mishra, Dr. Garima Srivastava, Dr. Sheeba and Dr. Parul Singh to be sympathetic and principle-centered persons. Their will to help even when they are far apart from me and preoccuption has made me develop deep respect for them.

Exuberant personalities of Dr. Rajiv Dwivedi, Dr. Pragya Shukla, Dr. Ranjana Singh and Dr. Anita Singh will always be perpetual source of inspiration for me who made themselves always available even through their busy schedule. They encouraged me to grow intellectually and have taught me so much from their actions and not words alone. Words really fall short to praise their impeccable affection for me.

Needless to mention that my colleagues Dr. Vijay Pratap Singh and Dr. Geeta Yadav not only helped me in experiments and writing and compiling of the thesis but also supported me a lot in my odd times. Our combined efforts definitely resulted into more than the additive. It would have been a lonely lab without Ms. Gausiya Bashri and Ms. Pragya Mishra with whom I shared fun and joy in later days of my stay in the
laboratory. Jitendra, Madhulika, Shikha, Akriti, Neha, Parul and Rachana made it livelier than ever before. It shall be harder to remove the recollection of their guileless temperament.

I would also like to gratefully acknowledge the support of some very special individuals. They helped me immensely by giving me encouragement and friendship. They mirrored back my ideas so I heard them aloud, an important process for shaping my thesis work. Mr. Brij Bhan Yadav, Mr. Santosh Kumar, Dr. Shiv Mahendra Singh, Dr. Durgesh Kumar Tripathi, Dr. Anand Mohan, Dr. Deep Mala Singh and Dr. Ritambhara Tripathi deserve special mention.

Interdependence is certainly more valuable than independence. Words are inadequate in offering my thanks to my seniors in the department Dr. Upendra Nabh Tripathi and Dr. Amit Singh for their encouragement and moral support throughout. This thesis is definitely the result of support of Mr. Arvind Yadav, Dr. Ram Singh Yadav, Mr. Dharmendra Kumar, Mr. Ashutosh Tripathi, Mr. Yashwant Kumar and Dr. Shweta Verma. This is a pleasant opportunity to express my gratitude for all of them.

Beyond the confines of the department, my friends Dr. Shailendra Chaudhari, Dr. Ved Prakash Singh and Mr. Sandeep Kumar were proved to be the best counselors all the time whenever I sought their advice on different aspects of life. I would ever be grateful to Dr. Savita Gangwar, Department of Plant Science, M. J. P. Rohilkhand University, Bareilly for her help in so many ways. When I called for a help, Mr. Subhash Chand (University of Texas, Arlington, USA) and Mr. Neeraj Kumar Dubey (NBRI, Lucknow) always tried their best to send me the research papers of different journals which could not be explored in our institution.

I don’t want to forget mentioning my warm thanks to Sri G. D. Joshi and Sri J. P. Joshi who took care of me throughout my experiments. I am also thankful to Sri Ganiko Prasad, Sri Ajay Tiwari and Sri Jay Prakash and other members of the department for their kind help and motivation.

I would be failing in my duty if I do not acknowledge the sacrifice and contribution of my revered parents who kept me free from family obligations to make my career successful. I also greatly acknowledge the support and encouragement provided
by my elder sisters and brother. They have been real source of illumination and also the most kind, helpful and trustful friends. Despite the worldly affairs, they have always been available to understand me and always help me to grasp the values that are universal to mankind. Despite them, I have been privileged to come across with Sri Ashok Kumar Pandey, who always stood by me through the good times and bad.

It was really a pleasure to be benefitted by the expertise of Mr. Rajeev Mishra in giving final touch to the present thesis. His jovial and sensible attitude coupled with extraordinary potential to work, with perfection and dignity is really commendable. His humility reminds me that the true merit is like a river: the deeper it is, the less noise it makes.

The chain of my gratitude would be definitely incomplete if I would forget to thank the Almighty of this chain, The God Himself. I thank the God for giving me this truly wonderful and magnanimous opportunity to work and to make all things possible.
