Acknowledgements

Throughout this PhD journey, I have been fortunate to work with some amazing people who have not only constantly inspired me but also supported me in numerous ways. Therefore, this thesis would be incomplete without expressing my gratitude to all those who have contributed towards my all-rounded development during my training as a PhD student and making this thesis a reality. Firstly, I would like to extend my heartfelt gratitude to Prof. K. Satyamoorthy, my co-guide, for giving me the opportunity to be a part of School of Life Sciences. I have always looked up to him and his contagious passion for research has continually inspired me to think differently, work harder, push my limits and give every task my best effort. I could not thank him enough for his scientific expertise as well as his valuable insights in shaping my experiments, papers and thesis. I am indebted to Dr. Manjunath Joshi, my PhD guide, for giving me the opportunity to undertake this challenging project. My journey in School of Life Sciences began with him right by my side and my utmost gratitude goes to him for being my support system through all ups and downs. I have genuinely appreciated his depth of knowledge, his unwavering support and guidance, thought-provoking discussions and immense help at every step of this journey. Thank you for all the generosity you have shown with your time in refining my experimental plans, exposing me to new exciting opportunities, correcting my abstracts/posters/presentations/thesis, keeping me on track, motivating me, contributing to my academic growth and celebrating even the smallest success. I greatly appreciate all the care and affection; you and your family has showered upon me over the years.

I owe my profound gratitude to Dr. P. M. Gopinath for the faith he instilled in my capabilities and for introducing me to this incredible world of research at School of Life Sciences. From being the first person I knew before joining this institute to always greeting me with a smile and being my source of encouragement throughout the years, I am extremely thankful to him. Besides my guides, my Doctoral Advisory Committee (DAC) Members: Prof. Padmalatha Rai S, Dr. T. S. Murali and Dr. Shama Prasada K have been instrumental in the successful completion of this thesis. I would like to sincerely thank them for all their constructive suggestions and support right from the beginning that has helped me refine my work.

This PhD journey would not have been possible without the funding, support and infrastructure from Manipal Academy of Higher Education (MAHE), through the T. M. A. Pai Structured PhD program, Indian Medical Research Council (ICMR) through the Senior Research fellowship and DBT through the project assistant fellowship. It has been a privilege to attend and present my work at various national and international conferences funded by travel scholarships from Manipal Academy of Higher Education, SciGenome Research Foundation (Chennai, India) and International Union of Biochemistry and Molecular Biology (Calgary, Canada), which have undoubtedly been some highlights of this journey.
I would also like to acknowledge the clinicians Dr. L. Ramachandra, Dr. Prashanth Adiga, Dr. Lavanya Rai and all the sample donors for their cooperation and generous contribution of their surgical discard samples.

Dr. T. G Vasudevan has been my source of constant support and guidance. Thank you for guiding me in the right path, for your words of wisdom, for being there to talk, injecting me with doses of reality and for being ready to always help with a big smile.

I am thankful to my seniors Dr. Harish Rotti, Dr. Raghavendra Upadhya, Dr. Sanjiban Chakrabarty, Dr. Shivkumar B. M., Dr. Kamalesh Mumbrekar, Dr. Ravishankar Bellampalli, Dr. Ananthapadmanabha, Dr. Venu Bharadwaj and Dr. Himanshu Gupta for their contributions in enhancing my knowledge as well as skillset, sharing their technical experiences, enormous help in troubleshooting and continued encouragement.

I would like to thank the technicians who have generously assisted towards the smooth running of all our experiments and making this project a success, Mr. Manoj for being so kind and all his help with Mass Spetrometry, Mrs. Veena Bhat and Mrs. Rekha Nayak for their assistance with cell culture related issues, Mrs. Jyothi Nayak for the help and guidance with flow cytometry, Mr. Rajesh and Mrs. Sandhya for being the go-to people for help with sequencing, Mrs. Shobha Acharya, Mrs Geetha Ravindra, Mr. Sundar, Mr. Ganesh and Mr. Harish for all their help and support through the years.

My sincere thanks to the faculty at School of Life Sciences Dr. G. K. Bhat, Prof. Satish Rao, Dr. Guruprasad, Dr. Saadi Abdul Vahab, Prof. K. K. Mahato, Dr. Bobby Paul, Dr. Raja Shekhar, Dr. Muttusami, Dr. Babitha, Dr. Vidhu, Dr. Roopa, Dr. Herman and Mr. Bharat Prasad for extending their support, expert advice and being a part of my journey here.

I am thankful to my wonderful colleagues specially Vaibhav Shukla, Bharat H.R, Shubhankar Das, Sandeep Mallya, Nagaraj Nayak, Harpreet Kukreja, Rayzel Fernandes, Vinay Vargese for all the stimulating discussions, entertaining conversations, the sleepless nights we worked together, for all their help, fun and laughter we have shared in the past few years. I would also like to thank Raghu, Vijendra Prabhu, Divya Padma, Manjunath S. D., Smitha Bhat, Supriya, Suma Prabhu, Suprithi Ghosh, Guruprasad B, Raghushaker C. R., Kiran K, Manik Vohra, Mangala Hegde, Divya Adiga, S. Vashishta, Prasanth B. R., Pradyumna J, Raviprasad K. V., for being there to help in times of need.

The administrative staff at School of Life Sciences, Mr. Ashok Prabhu, Mr. Chandrakanth Rao, Mr. Harish KN, Mrs. Rashmi V and Mr. Harish M have always been very accommodating with any administrative and purchasing issues. A special thanks goes to Mr. Narayan, Mr. Sadanand, Mr. Karunakar, Mr. Naveen, Mr. Prabhakar and all the housekeeping staff as well as security personnel who have tirelessly worked in the background contributing in a number of ways.

This journey was exceptionally memorable because of all the great friends I made during this time. Thank you Samatha Bhat, Dr. Shama Prasada K, Shreesha Bhat K, Deepika Bhat, Melisa Andrade.
and Rayees Ahamed for all the fun times, enjoyable conversations, being my strength when times were tough, constant encouragement and unconditional support which will be cherished for life. BQ hostel has been my home away from home during my PhD and I am extremely thankful for the bonding with the staff at Sodexo BQ for their hospitality, kind words and wonderful homely food that has worked like magic in reverting my stressful situations and bad moods. Inspite of our hectic research schedules, not-so-frequent conversations and being so far away, my childhood friend Mohan has always encouraged me. I am grateful for his unconditional friendship, understanding my passion for physics, making mathematics easier for me and always being open to scientific discussions. I would also like to express my wholehearted thanks to my friend Lincy Joshua for being so supportive and bearing with me all these years.

Growing up, I have always aspired to study well and enhance my knowledge in various fields. My school teacher Mr. V. Srinivasan and his wife Mrs. Padma Srinivasan have been instrumental in directing me towards the right path and ever supportive of my aspirations. I would like to express my heartfelt thanks to them for being my second family. I would not be pursuing my PhD degree today, if it wasn’t for the guidance and inspiration of Dr. K. Marimuthu, who piqued my interest in the field of research, motivated me to work hard and cultivated in me an undying passion for research. He took me under his wing, introduced me to his colleagues in the scientific fraternity and extensively trained me during my Master’s degree. I have always admired my uncle, Dr. Venkataswamy Reddy whose encouragement, words of wisdom and affection have gone a long way in making me whom I am today. I sincerely owe my academic achievements to these three people who were defining factors in moulding my career and thanks would be a very small word to express my gratitude.

I am very fortunate to have a great family which has been my pillar of strength throughout life. My parents Mr. Aswath Reddy and Mrs. Meenakshi have always believed in me and taught me to achieve my dreams through all odds. My sister Mrs. Saila has been my greatest support, my critic and has been extremely proud of what I have been doing. Although I sometimes cannot exactly explain what I do in the lab, your interest to understand things and encouraging words motivate me to work harder. I am very grateful to my brother-in-law Mr. Janardhana Reddy, niece Likitha and nephew Punith for all their moral support throughout and being excited about all my academic achievements. Despite the distance, their love and frequent conversations have kept me going. Last but not the least, I would like to thank my dear cousins Dr. Muralidhar, Mr. Vinay Kumar and Mr. Bharath for being so caring, sharing all my joys and being a ray of hope in my sorrows.

Finally, I would like to apologise if at this stage, I have missed to mention anyone else who may have contributed to the successful completion of this significant milestone in my life.

A. Balakrishnan
