# Table of Contents

Index of Figures ........................................................................................................ iv

Index of Tables .......................................................................................................... vi

Chapter 1 .................................................................................................................... 1
  1.1 Introduction ........................................................................................................... 1
  1.2 Objectives ........................................................................................................... 4
  References ............................................................................................................... 4

Chapter 2 .................................................................................................................... 8
  2.1 Chemistry and synthesis of Flavones ................................................................... 8
    2.1.1 Allan-Robinson reaction .............................................................................. 9
    2.1.2 Auwers synthesis ...................................................................................... 9
    2.1.3 Baker – Venkataraman rearrangement ...................................................... 10
    2.1.4 Algar - Flynn - Oyamada (AFO) synthesis [27, 28] .................................. 10
  2.2 Flavonoid Metal Complexation ......................................................................... 11
  2.3 Biological Activity of Flavonoid Metal Complexes ........................................... 12
    2.3.1 Antioxidant activity ................................................................................. 12
    2.3.2 Antibacterial activity .............................................................................. 13
    2.3.3 Anti-inflammatory activity ..................................................................... 14
    2.3.4 Anticancer activity ................................................................................. 15
  References ............................................................................................................. 16

Chapter 3 ................................................................................................................... 24
  3.1 Materials and Methods ...................................................................................... 24
    3.1.1 Synthesis of Flavonols by Algar - Flynn - Oyamada synthesis ............. 26
    3.1.2 Synthesis of Flavones ........................................................................... 28
  3.2 Experimental ..................................................................................................... 29
    3.2.1 General method of synthesis of chalcones .............................................. 29
    3.2.2 General method of synthesis of flavonols .............................................. 45
    3.2.3 General method of synthesis of flavones .............................................. 50
    3.2.5 Determination of Absorption maxima (λmax) and Molar absorption coefficient (εmax) of test compounds .................................................. 55
    3.2.6 Job's method ......................................................................................... 56
    3.2.7 Estimation of metal in the complexes ................................................... 60
    3.2.8 Determination of partition coefficient (log P) [5] .................................. 62
    3.2.9 Determination of redox potential ......................................................... 65
5.5.8 COX – LOX inhibition by test compounds ............................................. 164
5.5.9 Acute oral toxicity .................................................................................. 165
5.5.10 Effects of selected test compounds on Carrageenan-induced acute paw edema ........................................................................................................ 165
5.5.11 Effect of selected test compounds on Carrageenan-induced air-pouch .. 166
5.5.12 Effect of selected test compound on CFA-induced arthritis ............... 166
5.5.13 Anticancer studies ................................................................................ 167
Summary ........................................................................................................ 168
Scope ............................................................................................................. 171
