List of figures

Chapter 1
Figure 1. 1 Limitations and opportunities with copper for its development as a pharmaceutical product .................. 16
Figure 1. 2 Mechanism of action of copper in the prevention of osteoporosis ......................................................... 25

Chapter 2
Figure 2. 1 General principle of biosynthesis of copper nanoparticles ................................................................. 36
Figure 2. 2 Application of copper resistant bacteria in developing pharmaceutical product of copper ............. 41

Chapter 4
Figure 4. 1 Gram staining and Schaeffer & Fulton spore staining of SWSD1 (A & B) and PRSDM (C & D)... 55
Figure 4. 2 Growth pattern of SWSD1 (A) and PRSDM (B) ................................................................. 55
Figure 4. 3 Contour plot showing the effect of selected variable on yield of extracellular protein concentration ................................................................. 80
Figure 4. 4 Effect of pH on SPR of CuNps during biosynthesis .................................................................. 83
Figure 4. 5 Effect of temperature on SPR of CuNps during biosynthesis .................................................. 83
Figure 4. 6 Effect of copper ion concentration on SPR of CuNps during biosynthesis .......................... 83
Figure 4. 7 Effect of volume of cell free filtrate on SPR of CuNps during biosynthesis .......................... 84
Figure 4. 8 SPR spectrum of SWSD1 and PRSDM ............................................................................. 65

Chapter 5
Figure 5. 1 Pareto chart for main effects on optical density (A) and (B) dry weight of cells ..................... 79
Figure 5. 2 Pareto chart and main effect plot for extracellular proteins ............................................................ 79
Figure 5. 3 Contour plot showing the effect of selected variable on yield of extracellular protein concentration .......................................................................... 80
Figure 5. 4 Effect of pH on SPR of CuNps during biosynthesis .................................................................. 83
Figure 5. 5 Effect of temperature on SPR of CuNps during biosynthesis .................................................. 83
Figure 5. 6 Effect of copper ion concentration on SPR of CuNps during biosynthesis .......................... 83
Figure 5. 7 Effect of volume of cell free filtrate on SPR of CuNps during biosynthesis .......................... 84
Figure 5. 8 3D Surface plot showing the effect of selected variable on Surface Plasmon Resonance (SPR) of biosynthesized CNPs in cell free extract of Bacillus cereus .......................................................................... 85
Figure 5. 9 3D Surface plot showing the effect of selected variable on particle size of biosynthesized CNPs in cell free extract of Bacillus cereus .......................................................................... 85
Figure 5. 10 Characterization of CuNps synthesized at optimized conditions. Fig. A represents UV-Visible spectra of CuNps and showing two distinct peaks for their surface plasmon resonance. Fig B represents particle size histogram for CuNps. .......................................................................... 87

Chapter 6
Figure 6. 1 Biosynthesis of BCuNps, A-cell free filtrate, B-reaction mixture and C-copper sulphate stock solution ................................................................................................. 96
Figure 6. 2 Purification of BCuNps by electro deposition .............................................................................. 98
Figure 6. 3 Purification by concentration followed by dialysis ..................................................................... 98
Figure 6. 4 Purification of BCuNps by cation exchange chromatography .................................................. 99
Figure 6. 5 UV-Visible spectrum of BCuNps ......................................................................................... 100
Figure 6. 6 DLS histogram for particle size distribution ............................................................................. 101
List of figures

Figure 6. 7. Electron microscopic image of BCuNps, A-SEM and B-TEM.................................................. 101
Figure 6. 8. Elemental analysis in BCuNps by Energy dispersive spectroscopy............................................. 102
Figure 6. 9. XRD pattern of BCuNps ........................................................................................................... 103
Figure 6. 10. FTIR spectrum of BCuNps....................................................................................................... 103

Chapter 7
Figure 7. 1. Cytotoxicity effect of native copper and BCuNps on normal cell lines. ................................. 121
Figure 7. 2. Cytotoxic effect of native copper and BCuNps on cancer cell lines. ........................................ 121
Figure 7. 3. Cytotoxic effect of native copper and BCuNps on HaCat cells ................................................ 122
Figure 7. 4. Cell viability and Cell proliferation assay on HaCat cells.......................................................... 122
Figure 7. 5. Scratch wound assay on HaCat cells ......................................................................................... 123
Figure 7. 6. Percentage cell migration in 24 h. ............................................................................................... 123
Figure 7. 7. Effect of treatment on COX-2 expression. ................................................................................. 124
Figure 7. 8. Cytotoxic effect of native copper and BCuNps on A549 cells. ................................................... 124
Figure 7. 9. Oxidative stress by BCuNps and native copper on A549 cells .................................................. 125
Figure 7. 10. Genotoxic effect of BCuNps by apoptotic pathway on A549 cells ........................................... 125
Figure 7. 11. Genotoxic effect of BCuNps by DNA fragmentation of A549 cells ........................................... 125
Figure 7. 12. Genotoxic effect of BCuNps on cell cycle of A549 cells.......................................................... 126
Figure 7. 13. Cell viability assay of native copper and BCuNps on hFOB cells ........................................... 126
Figure 7. 14. Bone formation effect of BCuNps by enhancing cell differentiation in hFOB cells ............... 127
Figure 7. 15. Bone formation effect of BCuNps by enhancing collagen formation in hFOB cells ............... 128
Figure 7. 16. Estimation of collagen in BCuNps treated hFOB cells ......................................................... 128
Figure 7. 17. Bone formation effect of BCuNps by enhancing calcium deposition in hFOB cells ............... 129
Figure 7. 18. Estimation of calcium deposition in BCuNps treated hFOB cells ......................................... 129
Figure 7. 19. Estimation of alkaline phosphatase activity in BCuNps treated cells after 3 days ................. 130

Chapter 8
Figure 8. 1. Study design for formulation development ................................................................................. 141
Figure 8. 2. In vitro cytotoxic effect of active ingredients .............................................................................. 142
Figure 8. 3. DSC thermograms of active ingredients a) RIS, b) COP, c) BCuNps, d) RISCOP & e) RISBCuNps ............................................................................................................................................ 143
Figure 8. 4. FTIR spectrums of active ingredients. a) RIS, b) COP, c) BCuNps, d) RISCOP & e) RISBCuNps ............................................................................................................................................ 144
Figure 8. 5. XRD spectrum of active ingredients. a) RISCOP & b) RISBCuNps ............................................. 145
Figure 8. 6. Developed gel formulations ....................................................................................................... 146
Figure 8. 7. Change in the storage and loss modulus with improving strain ............................................... 147
Figure 8. 8. Effect of angular velocity of shear on complex viscosity of gel .............................................. 148
Figure 8. 9. Effect of shear rate on the viscosity of the gel .......................................................................... 149
Figure 8. 10. DSC thermograms of drug and excipients mixtures a) RIS, b) COP, c) BCuNps, d) RISCOP & e) RISBCuNps ............................................................................................................................................ 150
Figure 8. 11. FTIR spectrum of drug and excipients mixtures a) RIS, b) COP, c) BCuNps, d) RISCOP & e) RISBCuNps ............................................................................................................................................ 151
List of figures

Figure 8.12. Drug release profile of copper and risedronate from developed gel formulations .................. 152
Figure 8.13. Skin permeation profile of copper and risedronate in developed gel formulations .................. 152
Figure 8.14. Study design for OVX rat model for anti-osteoporotic activity ............................................. 155
Figure 8.15. Body weight variation during acute dermal toxicity studies ............................................... 158
Figure 8.16. Body weight variation in OVX model animals before start of treatment ................................. 159
Figure 8.17. Body weight variation in OVX model animals during the course of treatment ....................... 160
Figure 8.18. Histopathology section images of liver, right kidney and left kidney for OVX model animals... 164
